

RECEIVED  
MSDH-WATER SUPPLY  
2023 JUN 26 AM 8:57

# Certification

Water systems serving 10,000 or more must use:  
Distribution Method I

Water systems serving 500 - 9,999 must use:  
Distribution Method I OR  
Distribution Method II, III, and IV

Water system serving less than 500 people must use:  
Distribution Method I OR  
Distribution Method II, III, and IV OR  
Distribution Method III and IV

OFFICE USE ONLY

Public Water Supply name(s):  Acona Water Assn.	7-digit Public Water Supply ID #(s):  0260001
---	---

## Distribution (Methods used to distribute CCR to our customers)

<input type="checkbox"/> I. CCR directly delivered using one or more method below:	
<input type="checkbox"/> *Provided direct Web address to customer <input type="checkbox"/> Hand delivered <input type="checkbox"/> Mail paper copy <input type="checkbox"/> Email	*Add direct Web address (URL) here:  Example: "The current CCR is available at <a href="http://www.waterworld.org/ccrMay2023/0830001.pdf">www.waterworld.org/ccrMay2023/0830001.pdf</a> . call (000) 000-0000 for paper copy".
<input checked="" type="checkbox"/> II. Published the complete CCR in the local newspaper. <i>Holmes County Herald</i>	Date(s) published: <i>6-15-23</i>
<input checked="" type="checkbox"/> III. Inform customers the CCR will not be mailed but is available upon request. List method(s) used (examples – newspaper, water bills, newsletter, etc.). <i>_____</i>	Date(s) notified: <i>6-15-23</i> Location distributed: <i>Holmes Co</i>
<input checked="" type="checkbox"/> IV. Post the complete CCR continuously at the local water office. <input type="checkbox"/> "Good Faith Effort" in other public buildings with the water system service area (i.e. City Hall, Public Library, etc.)	Date: <i>6-15-23</i> Locations posted: <i>Water Building @ Acona</i>

## Certification

This Community public water system confirms it has distributed its Consumer Confidence Report (CCR) to its customers and the appropriate notices of availability have been given and that the information contained in its CCR is correct and consistent with the compliance monitoring data previously submitted to the MS State Department of Health, Bureau of Public Water Supply and the requirements of the CCR rule.

Name: <i>Jimmie D. Thomas</i>	Title: <i>Operator</i>	Date: <i>6-15-23</i>
----------------------------------	---------------------------	-------------------------

## Submittal

Email the following required items to [water.reports@msdh.ms.gov](mailto:water.reports@msdh.ms.gov) regardless of distribution methods used.  
 1. CCR (Water Quality Report)      2. Certification      3. Proof of delivery method(s)

*Acona*

**2022 Annual Drinking Water Quality Report**  
**Acona Water Association**  
**PWS#: 0260001**  
**May 2023**

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water.

**Contact & Meeting Information**

If you have any questions about this report or concerning your water utility, please contact Edwin Tolbert at 662.834.3122. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the last Monday of each month at 7:00 PM at the Acona Water Association Office on HWY 17.

**Source of Water**

Our water source is from wells drawing from the Meridian Upper Wilcox Aquifer. The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Acona Water Association have received a moderate susceptibility ranking to contamination.

**Period Covered by Report**

We routinely monitor for contaminants in your drinking water according to federal and state laws. This report is based on results of our monitoring period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2022. In cases where monitoring wasn't required in 2022, the table reflects the most recent testing done in accordance with the laws, rules, and regulations.

As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

**Terms and Abbreviations**

In the table you may find unfamiliar terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

**Action Level (AL)**: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

**Maximum Contaminant Level (MCL)**: The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

**Maximum Contaminant Level Goal (MCLG)**: The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

**Maximum Residual Disinfectant Level (MRDL)**: The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

**Maximum Residual Disinfectant Level Goal (MRDLG)**: The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**Parts per billion (ppb) or micrograms per liter**: one part by weight of analyte to 1 billion parts by weight of the water sample.

**Parts per million (ppm) or Milligrams per liter (mg/l)**: one part by weight of analyte to 1 million parts by weight of the water sample.

## TEST RESULTS

Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measurement	MCLG	MCL	Likely Source of Contamination
<b>Inorganic Contaminants</b>								
10. Barium	N	2022	.005	.0036 - .005	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
14. Copper	N	2018/20*	.1	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
17. Lead	N	2018/20*	0	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
<b>Unregulated Contaminants</b>								
Sodium	N	2021*	57.6	54.9 - 57.6	ppm	20	0	Road Salt, Water Treatment Chemicals, Water Softeners and Sewage Effluents.
<b>Disinfection Byproducts</b>								
81. HAA5	N	2022	8.45	No Range	ppb	0	60	By-Product of drinking water disinfection.
82. TTHM [Total trihalomethanes]	N	2022	8.61	No Range	ppb	0	80	By-product of drinking water chlorination.
Chlorine	N	2022	1.5	.8 - 2	mg/l	0	MRDL = 4	Water additive used to control microbes

\* Most recent sample. No sample required for 2022.

Sodium. EPA recommends that drinking water sodium not exceed 20 milligrams per liter (mg/L). Excess sodium from salt in the diet increases the risk of high blood pressure and cardiovascular disease.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

### LEAD INFORMATION

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7682 if you wish to have your water tested.

### VIOLATIONS

This public water system received a recordkeeping violation for not submitting the Annual Report by December 31, 2022. The report has since been completed and this system was returned as compliant.

### UNREGULATED CONTAMINANTS

Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulations are warranted.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man-made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Acona Water Association works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

 day of \_\_\_\_\_, 2023

**2022 Annual Drinking Water Quality Report**  
 Acorn Water Association  
 PWSID: 0260001  
 May 2023

You are pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our primary goal is to provide you with a safe and abundant supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water.

**Contact Us for More Information:**  
 If you have any questions about this report or concerning your water utility, please contact Edwin Tober at 663.634.3122. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the 1st Monday of each month at 7:00 PM at the Acorn Water Association Office on HWY 17.

**Source of Water:**  
 Our water source is from wells drawing from the Meridian Upper Floridan Aquifer. The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility information was made has been furnished to our public water system and is available for viewing upon request. The wells for the Acorn Water Association have installed a monitor automatically relating to contamination.

**Period Covered by Report:**  
 The publicly monitor for contaminants in your drinking water according to federal and state laws. The report is based on results of our monitoring period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2022. In cases where monitoring wasn't required in 2022, the table reflects the most recent testing done in accordance with the laws, rules, and regulations.

**Water Quality:**  
 As water flows over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity, industrial operations, such as vehicle wash facilities, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife. Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming, pesticides and herbicides, which may come from a variety of sources such as agriculture, when storm water runoff, and residential uses; organic chemicals in pesticides, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and auto repair systems; radon, a naturally occurring radioactive gas that can be found in groundwater; and disinfection by-products, which are formed when chlorine and other disinfectants are used to kill bacteria that may be present in drinking water. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of these contaminants. It's important to remember that the presence of these substances does not necessarily indicate that the water poses a health risk.

**Terms and Abbreviations:**  
 In the table you may find unfamiliar terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions.

**Action Level (AL):** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a drinking water system must follow.

**Maximum Contaminant Level Goal (MCLG):** The "Maximum Allowable" (MCLG) is the highest level of a contaminant that is allowed in drinking water. MCLGs are set as close to the MCLGs as feasible using the best available treatment technology.

**Maximum Contaminant Level (MCL):** The "MCL" is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLs are set for a margin of safety.

**Maximum Residual Disinfectant Level (MRDL):** The highest level of a disinfectant allowed in drinking water. There is convincing evidence that additional disinfection is necessary to control microbial contaminants.

**Maximum Residual Disinfectant Level Goal (MRDLG):** The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**Drinking Water Quality or Contaminant in this table:** one part by weight of analyte in 1 million parts by weight of the water sample.

**Each row reflects a total of 100 samples and the total:** one part by weight of analyte in 1 million parts by weight of the water sample.

TEST RESULTS									
Contaminant	Units	Date Collected	Level Detected	Range of Limits (if of Samples Exceeded) MCL/MCLG	MRDL	MCL	MCLG	MRDLG	Likely Source of Contamination
<b>Inorganic Contaminants</b>									
10. Nitrate	N	2022	0.0	0.000 - 10.0	ppm	10	1.0	1.0	Discharge of drilling wastes, fertilizer runoff, animal manure, amount of natural deposits
14. Cadmium	mg/L	2022	0.0	0.000 - 0.01	ppm	0.01	0.01	0.01	Discharge of industrial wastewater, leachate from landfills, natural deposits
17. Lead	mg/L	2022	0.0	0.000 - 0.01	ppm	0.01	0.01	0.01	Discharge of industrial wastewater, leachate from landfills, natural deposits
<b>Unregulated Contaminants</b>									
20. Trihalomethanes	mg/L	2022	0.0	0.000 - 0.1	ppm	0.1	0.1	0.1	By-product of drinking water disinfection
<b>Disinfection Byproducts</b>									
22. Total Trihalomethanes	mg/L	2022	0.0	0.000 - 0.1	ppm	0.1	0.1	0.1	By-product of drinking water disinfection
23. Haloacetic Acids (HAA5)	mg/L	2022	0.0	0.000 - 0.1	ppm	0.1	0.1	0.1	By-product of drinking water disinfection
24. Haloacetonitriles (HANs)	mg/L	2022	0.0	0.000 - 0.1	ppm	0.1	0.1	0.1	By-product of drinking water disinfection

**Notes:**  
 \* MCLG values are not enforceable for 2022.  
 \*\* MCLG values are not enforceable for 2022.  
 † MCLG values are not enforceable for 2022.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems compliance of monitoring requirements, we will monitor your drinking water for any of the following contaminants:

**LEAD INFORMATION:**  
 Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 663.634.3122 if you wish to have your water tested.

**VIOLATIONS:**  
 This public water system received a non-enforcement violation for not submitting the Annual Report by December 31, 2022. This report has since been completed and the system was returned to compliance.

**UNREGULATED CONTAMINANTS:**  
 Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulatory action is warranted.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man-made. These substances can be inorganic, organic, or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.624.6746.

Some people may be more susceptible to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infection. These people should seek advice about drinking water. Your health care provider may provide EPA/ACDC guidelines on appropriate means to lessen the risk of infection. EPA/ACDC and other recommended guidelines are available from the Safe Drinking Water Hotline 1.800.624.6746.

The Acorn Water Association works every day to provide you quality water to every tap. We ask that our customers help us protect our water source, which is the heart of our community, our way of life and our children's future.

## HOLMES COUNTY HERALD

### LEXINGTON, MISSISSIPPI

**STATE OF MISSISSIPPI,  
HOLMES COUNTY**

Personally appeared before me, the undersigned authority, Chancery Clerk of said County and State, Maria M. Edwards, publisher of a public newspaper called the *Holmes County Herald* established in 1959 and published continuously since that date in said County and State, who, being duly sworn, deposed and said that the notice, of which a true copy is hereto annexed, was published in said paper for 1 time(s), as follows, to wit:

**2022 Annual Drinking Water Quality Report**  
**Lafayette Water Association**  
**PRFC: 0280011**  
**May 2023**

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our overall goal is to provide you with a safe and adequate supply of drinking water. We want you to understand the efforts we make to continuously improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water.

**Content & Viewing Information:**  
 If you have any questions about the report or concerning your water utility, please contact Edward Ballew at 662.834.2645. We want our valued customers to be informed about their water utility. If you want to learn more, please join us at any of our regularly scheduled meetings. They are held on the second Tuesday of the month at 6:00 PM at the Lafayette Office Building on HWY 17 N of Lexington.

**Source of Water:**  
 Our water source is from wells drawing from the Wilcox Aquifer. The source water assessment has been completed for our public water system to determine the overall susceptibility of the drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determination was made has been furnished to our public water system and is available for viewing upon request. The wells for the Lafayette Water Association have received a moderate ranking in terms of susceptibility to contamination.

**Period Covered by Report:**  
 The quality monitor for contaminants in your drinking water according to federal and state laws. This report is based on results of our monitoring period of January 1st to December 31st, 2022. It covers where monitoring wasn't required in 2022, the data reflects the most recent testing done in accordance with the law, rules, and regulations.

**As water travels over the surface of land or underground, it absorbs naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity. Natural contaminants such as radon and radium, that may come from natural sources, wells, systems, agricultural practices, and industry, and synthetic substances, such as herbicides and pesticides, which can be naturally occurring or result from human activities. Industrial, agricultural, or domestic wastewater discharges, oil and gas production, mining, or farming practices and fertilizers, which may come from a variety of sources such as agriculture, residential, and industrial. EPA provides regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of these contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.**

**Terms and Abbreviations:**  
 In the table you may find unfamiliar terms and abbreviations you might not be familiar with. To help you better understand these terms, we've provided the following definitions:

**Action Level (AL):** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

**Maximum Contaminant Level (MCL):** The "Maximum Allowable" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLG as is feasible using the best available treatment technology.

**Maximum Contaminant Level Goal (MCLG):** The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

**Maximum Residual Disinfectant Level (MRDL):** The highest level of a disinfectant allowed in drinking water. There is convincing evidence that disinfectants are a disinfectant by necessary to control microbial contaminants.

**Maximum Residual Disinfectant Level Goal (MRDLG):** The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**Parts per billion (ppb) or micrograms per liter:** one part by weight of analyte to 1 billion parts by weight of the water sample.

**Parts per million (ppm) or milligrams per liter:** one part by weight of analyte to 1 million parts by weight of the water sample.

Contaminant	Monitor	Date	Level	Range of Values	MCLG	MCL	SD	Level Below Which Contamination
<b>Microbiological Contaminants</b>								
1. Total Coliform Bacteria (including E. coli)	N	2022	0	No Range	0	0	0	Presence of coliform bacteria in the presence of 10% of samples exceeding 100 CFU/100 mL
2. Arsenic	N	2022	0	No Range	0	0	0	Amount of arsenic determined from inorganic, organic, and arsenic acid and arsenic acid
3. Barium	N	2022	0.00	0.074 - 0.002	ppm	2	1	Discharge of drilling water; discharge from oil and gas production; discharge from industrial operations
4. Chloride	N	2022	0	0 - 0	ppm	100	100	Discharge from oil and gas production; discharge from industrial operations
5. Copper	N	2019/20	0	0	ppm	1.3	AL-1.3	Corrosion of plumbing; plumbing materials; presence of industrial discharges from factories and refineries
6. Fluoride	N	2022	0.2	0.06 - 0.2	ppm	4	4	Discharge of mining water; discharge from oil and gas production; discharge from industrial operations
7. Lead	N	2019/20	0	0	ppb	0	AL-0	Corrosion of plumbing; plumbing materials; presence of industrial discharges from factories and refineries
<b>Unregulated Contaminants</b>								
8. Barium	N	2021	21.6	21.7 - 21.6	ppm	2	2	Lead, Barium, Water Treatment Chemicals, Heavy Metals and Sodium Sulfate
<b>Disinfection By-Products</b>								
9. THM5	N	2022	16.8	No Range	ppm	0	0	By-product of drinking water disinfection
10. THM5	N	2022	17.3	No Range	ppm	0	0	By-product of drinking water disinfection
11. Haloacetic Acids (HAA5)	N	2022	1.7	1.7 - 2.7	ppb	0	0	By-product of drinking water disinfection

**Violations:**  
 This public water system received a monitoring violation for not submitting the Annual Report by December 31, 2022. The report has since been completed and this system was returned as compliant.

**During November 2022, our system received a monitoring violation for not providing monitoring or testing for Microbiological sampling. We were required to test tap samples and the results showed we took time and therefore failed to meet the quality of our drinking water during that time. We have taken the required steps to ensure our water meets drinking water standards.**

**UNREGULATED CONTAMINANTS**  
 Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assess EPA's monitoring the occurrence of unregulated contaminants in drinking water and whether future regulations are needed.

All sources of drinking water are subject to natural contamination by substances that are naturally occurring or man-made. These substances can be inorganic, organic or synthetic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.624.6713.

Some people may be more vulnerable to contaminants in drinking water than the general population. Infants and young children, pregnant women, and the elderly are particularly at risk. People who have certain medical conditions, such as kidney disease, are also at risk. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 662.737.7322 if you wish to have your water tested.

The Lafayette Water Association works around the clock to provide you quality water every day. We ask that all our customers help us protect our water resources. MRDL is the heart of our community, our way of life and our children's future.
