2022 Annual Drinking Water Quality Report Midway Community Water Association PWS#: 0820010, 0820027 & 0820028 June 2023

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water.

Contact & Meeting Information

If you have any questions about this report or concerning your water utility, please contact Cindy M. Shipp at 662.571.0704. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Tuesday of each month at 7:00 PM at the Midway District 4 County Barn.

Source of Water

Our water source is from wells drawing from the Meridian Upper Wilcox Aquifer. The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Midway Community Water Association have received lower to moderate susceptibility rankings to contamination.

Period Covered by Report

We routinely monitor for contaminants in your drinking water according to federal and state laws. This report is based on results of our monitoring period of January 1st to December 31st, 2022. In cases where monitoring wasn't required in 2022, the table reflects the most recent testing done in accordance with the laws, rules, and regulations.

As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

Terms and Abbreviations

In the table you may find unfamiliar terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Maximum Contaminant Level (MCL): The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG): The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per billion (ppb) or micrograms per liter: one part by weight of analyte to 1 billion parts by weight of the water sample.

Parts per million (ppm) or Milligrams per liter (mg/l): one part by weight of analyte to 1 million parts by weight of the water sample

| Chlorine | Y | 2022 | 1.9 | .8– 2,6 | ppm | 0 | MRDL = 4 | Water additive used to control microbes |

^{*} Most recent sample. No sample required for 2022.

Disinfection By-Products:

(81) Haloacetic Acids (HAA5). Some people who drink water containing bromate in excess of the MCL over many years may have an increased risk of cancer (82) Total Trihalomethanes (TTHMs). Some people who drink water containing Trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous systems, and may have an increased risk of getting cancer.

Chlorine. Some people who use water containing chlorine well in excess of the MRDL could experience irritating effects to their eyes and nose. Some people who drink water containing chlorine well in excess of the MRDL could experience stomach discomfort.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

LEAD INFORMATION

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

VIOLATIONS

Our system # 820028, Haloacetic Acids (HAA5) exceeded the Maximum Contaminant Level.

We received a monitoring violation on system # 820028 for not completing monitoring for Chlorine. We were to take 1 sample and the records show we took none. The sample was labeled incorrectly therefore was not accepted. The sample has since been taken that show our water is meeting drinking water standards.

MONITORING AND REPORTING OF COMPLIANCE DATA VIOLATIONS SIGNIFICANT DEFICIENCIES

During a sanitary survey conducted on 11/02/2021, the Mississippi State Department of Health cited the following significant deficiency(s):

Capacity and Design of Storage Tanks

Corrective Actions: The system is scheduled to complete corrective actions by 3/27/2023 using a compliance plan or are within the initial 120 days minimum.

ENFORCEMENT

COMPLIANCE MEETING/ADMINISTRATIVE HEARING

On 3/30/2021 this public water system (# 280010) was required by the MS State Department of Health, Bureau of Public Water supply to participate in an Administrative Hearing due to violations of the Disinfection By-Products Rule. The operator was formally reprimand for his actions for failing to turn in samples.

UNREGULATED CONTAMINANTS

Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulations are warranted.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man-made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Midway Community Water Association works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of chinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We If you have any questions about this report or concerning your water utility, please confact Cindy M. Shipp at 662.5/1,0704. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled months. They are held on the first Tuesday of each month at 7:00 PM at the Mildway District 4 County Barn. 2022 ANNUAL DRINKING WATER QUALITY REPORT

MIDWAY COMMUNITY WATER ASSOCIATION

Our water source is from wells drawing from the Meridian Upper Wilcox Aquifer, The source water assessment has been completed for our public water system to determine the oversell susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Midway Community Water Association have recalved lower to

We routinely modifier to conteminants in your drinking water according to federal and state laws. This report is based on results of our monitoring period of January 1st to December 31st, 2022. In cases where monitoring wasn't required in 2022, the table reflects the most

recent lesting done in accordance with the laws, rules, and regulations.

Period Covered by Report

moderate susceptibility rankings to contamination.

Some people who drink water constaining chiectors will be excess of the MRDL could experience withing effects to their eyes and noise. Some people who drink water constaining chiectors will be excess of the MRDL could experience within an effects to their eyes and noise.

We are required to monitor your dinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whicher or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of load can cause socials health problems, ospecially for pregnant women and young children. Load in present, elevation is primarily from materials and components associated with service lines and home plumbing. Our water system is drinking water is primary graph plumbing quality drinking water, but cannot control the vatilety of meterials used in plumbing components. When nextern water has been sitting for saveral hours, you can minimize fit to pot entitled for load exposure by flushing your top for 30 ascords to your water has been sitting for chirking or cooking. If you are concerned about load in your water, you may wish to have your water for diriking water feet drinking water, using methods, and steps you can have to minimize exposure is available from the Sate Christing Water Fouline or si http://www.spis.gov/gatewater/feed. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.575.7582 if you wish to have your water tested.

VIOLATIONS

Our system # 820028, Halbacetic Acids (HAA5) exceeded the Maximum Contaminani Level

We received a monitoring violation on system # 820028 for not completing maniforing for Chlorine. We were to take 1 sample and records show we took noon. The sample was tabeled incorrectly therefore was not accepted. The sample has since treen taken t show our water is meeting drinking water standards. i the

ON ATSOZO21 this public water system (# 280010) was required by the MS State Department of Health, Bureau of Public Water supply On ATSOZO201 this public water system (# 280010) was required by the MS State Department of Health, Bureau of Public Water supply to participate in an Administrative Healthy due to violations of the Distriction By-Products Rule. The operator was formally reprimand for his actions for failing to turn in samples.

UNREGULATED CONTAMINANTS

Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminants in drinking water and whether contaminants in drinking water and whether future regulations are warranted.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man-made. These substances can be microbas, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least same amounts of some contaminants. The presence of contaminants does not noroactarily indicate that the water poses a health; risk, More information about contaminants and potential health offects can be obtained by calling the Environmental Protection Agency's Sale Drinking Water Hottino at 1,800,426,4791.

Some people may be more vulnerable to contaminants in drinking water than the general population, immuno-compromised persons such as porsons with carriory undergoing chamotherapy, persons who have undergoins organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infents can be particularly at risk from infections. These people should seek advise about drinking water from their health safe providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Copplicapondium and other microbiological contembants are evallable from the Safe Drinking Water Hotine 1.800.426.4791.

The Midway Community Waiter Association works around the clock to provide top quality water to every tap. We ask that customers help us protect our water sources, which ere the heart of our community, our way of life and our children's future. <u>B</u> OUT

Midway Community Water Association CCR Submission

Attachments:

MIDWAYWATER2022CCRREPORT.pdf

To Whom It May Concern:

Please see our attached CCR report along with our certification form and proof of publication. We published our report in our local paper on June 14, 2023. We also have it available for any members to view. We also post it on Mississippi Rural Water's website.

Please let me know if you need anything further from me.

Thank you,

Cindy Shipp Bookkeeper Midway Community Water Association
