# Certification

Water systems serving 10,000 or more must use:  
Distribution Method I

Water systems serving 500 - 9,999 must use:  
Distribution Method I OR  
Distribution Method II, III, and IV

Water system serving less than 500 people must use:  
Distribution Method I OR  
Distribution Method II, III, and IV OR  
Distribution Method III and IV

OFFICE USE ONLY

Public Water Supply name(s): <b>Calhoun Water Association</b>	7-digit Public Water Supply ID #(s): <b>0340001</b>
--	--

**Distribution** (Methods used to distribute CCR to our customers)

**I. CCR directly delivered using one or more method below:**

<input type="checkbox"/> *Provided direct Web address to customer <input type="checkbox"/> Hand delivered <input type="checkbox"/> Mail paper copy <input type="checkbox"/> Email	*Add direct Web address (URL) here:
	Example: "The current CCR is available at <a href="http://www.waterworld.org/ccrMay2023/0830001.pdf">www.waterworld.org/ccrMay2023/0830001.pdf</a> . call (000) 000-0000 for paper copy".

**II. Published the complete CCR in the local newspaper.**

Date(s) published:  
**6-21-23**

**III. Inform customers the CCR will not be mailed but is available upon request.**

List method(s) used (examples – newspaper, water bills, newsletter, etc.).

Date(s) notified:

Location distributed:

**IV. Post the complete CCR continuously at the local water office.**

Date:

Locations posted:

"Good Faith Effort" in other public buildings with the water system service area (i.e. City Hall, Public Library, etc.)

**Certification**

This Community public water system confirms it has distributed its Consumer Confidence Report (CCR) to its customers and the appropriate notices of availability have been given and that the information contained in its CCR is correct and consistent with the compliance monitoring data previously submitted to the MS State Department of Health, Bureau of Public Water Supply and the requirements of the CCR rule.

Name:	Title:	Date:
-------	--------	-------

**Submittal**

Email the following required items to [water.reports@msdh.ms.gov](mailto:water.reports@msdh.ms.gov) regardless of distribution methods used.

1. CCR (Water Quality Report)      2. Certification      3. Proof of delivery method(s)

**2022 Annual Drinking Water Quality Report**  
**Calhoun Water Association**  
**PWS#: 340001**  
**May 2023**

RECEIVED  
MSDH-WATER SUPPLY  
2023 JUN -7 AM 9: 20

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water.

#### **Contact & Meeting Information**

If you have any questions about this report or concerning your water utility, please contact Richard B. Todd at 601.425.1093. We want our valued customers to be informed about their water utility. If you want to learn more, please join us at any of our regularly scheduled meetings. They are held on the second Monday of the month at 7:00 PM at the water office.

#### **Source of Water**

Our water source is from wells drawing from the Catahoula Aquifer. The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Calhoun Water Association have received a lower to moderate ranking in terms of susceptibility to contamination.

#### **Period Covered by Report**

We routinely monitor for contaminants in your drinking water according to federal and state laws. This report is based on results of our monitoring period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2022. In cases where monitoring wasn't required in 2022, the table reflects the most recent testing done in accordance with the laws, rules, and regulations.

As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

#### **Terms and Abbreviations**

In the table you may find unfamiliar terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

*Action Level (AL)* : The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

*Maximum Contaminant Level (MCL)*: The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

*Maximum Contaminant Level Goal (MCLG)*: The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

*Maximum Residual Disinfectant Level (MRDL)*: The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

*Maximum Residual Disinfectant Level Goal (MRDLG)*: The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

*Parts per billion (ppb) or micrograms per liter*: one part by weight of analyte to 1 billion parts by weight of the water sample.

*Parts per million (ppm) or Milligrams per liter (mg/l)*: one part by weight of analyte to 1 million parts by weight of the water sample.

TEST RESULTS								
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL/MRDL	Unit Measurement	MCLG	MCL	Likely Source of Contamination
<b>Inorganic Contaminants</b>								
10. Barium	N	2022	.117	.0716 - .117	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
14. Copper	N	2019/21*	0	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
17. Lead	N	2019/21*	0	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
<b>Unregulated Contaminants</b>								
Sodium	N	2022	17.6	13.7 – 16.6	ppm	20	0	Road Salt, Water Treatment Chemicals, Water Softeners and Sewage Effluents.
<b>Disinfection By-Products</b>								
Chlorine	N	2022	1.3	.9 – 1.8	mg/l	0	MRDL = 4	Water additive used to control microbes

\* Most recent sample. No sample required for 2022.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

#### LEAD INFORMATION

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

#### VIOLATIONS

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected, however the EPA has determined that your water IS SAFE at these levels.

#### UNREGULATED CONTAMINANTS

Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulations are warranted.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man-made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Calhoun Water Association works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

2022 Annual Drinking Water Quality Report  
 Calhoun Water Association  
 PWS#: 340001  
 May 2023

...d to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality of the water we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water so that you can understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water.

**Meeting Information**

For any questions about this report or concerning your water utility, please contact Richard B. Todd at 601.425.1093. We would like to see our customers to be informed about their water utility. If you want to learn more, please join us at any of our regularly scheduled meetings. They are held on the second Monday of the month at 7:00 PM at the water office.

**Water**

Water is from wells drawing from the Catahoula Aquifer. The source water assessment has been completed for our public water supply to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A detailed information on how the susceptibility determinations were made has been furnished to our public water utility; available for viewing upon request. The wells for the Calhoun Water Association have received a lower to moderate risk of susceptibility to contamination.

**Monitoring Report**

We monitor for contaminants in your drinking water according to federal and state laws. This report is based on results of monitoring during the period of January 1 to December 31, 2022. In cases where monitoring wasn't required in 2022, the table reflects monitoring testing done in accordance with the laws, rules, and regulations.

Contaminants are found on the surface of land or underground. It dissolves naturally occurring minerals and, in some cases, radioactive materials. Contaminants can pick up substances or contaminants from the presence of animals or from human activity; microorganisms, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or result from mining activities. In order to ensure that tap water is safe to drink, EPA has established regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water from a public water system, including bottled water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not always mean that the water poses a health risk.

**Abbreviations**

You may find unfamiliar terms and abbreviations you might not be familiar with. To help you better understand these terms, we provided the following definitions:

**(AUC):** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water utility must follow.

**Maximum Contaminant Level (MCL):** The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

**Maximum Contaminant Level Goal (MCLG):** The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no expected risk to health. MCLGs allow for a margin of safety.

**Maximum Residual Disinfectant Level (MRDL):** The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

**Maximum Residual Disinfectant Level Goal (MRDLG):** The level of a drinking water disinfectant below which there is no known risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**Parts per billion (ppb) or micrograms per liter:** one part by weight of analyte to 1 billion parts by weight of the water sample.

**Parts per million (ppm) or milligrams per liter (mg/L):** one part by weight of analyte to 1 million parts by weight of the water sample.

Violation #/N	Date Collected	Level Detected	Range of Detects or 6th Sample Exceeded MCL/MCLG/AUC	Unit Measurement	MCLG	MCL	Utility Source of Contamination
<b>Microbial Contaminants</b>							
N	2022	1.0	0.74 - 1.07	ppm	2	2	Disinfection of drinking water; leachate from metal valves; cross-connections
N	2019/2021	0	0	ppm	1.5	1.5	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
N	2019/2021	0	0	ppm	0	0	Corrosion of household plumbing systems; erosion of natural deposits
<b>Organic Contaminants</b>							
N	2022	0.5	0.37 - 0.65	ppm	20	20	Wood-bill Water Treatment Chemicals; Water-bottlers and Storage Containers
<b>Inorganic By-Products</b>							
N	2022	1.5	0 - 4.8	mg/L	0	1.0	Water additive used to control corrosion

\*1 sample. No sample required for 2022.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are provided to you to let you know if your drinking water meets health standards. In an effort to ensure systems complete all monitoring, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

**NOTIFICATION**

Elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in water is primarily from materials and components associated with service lines and home plumbing. Our water system is designed for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. If you have been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

Based on the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and state requirements. We have learned through our monitoring and testing that some contaminants have been detected, however they are within the safe drinking water standards.

**UNREGULATED CONTAMINANTS**

Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated monitoring is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether health effects are warranted.

Drinking water are subject to potential contamination by substances that are naturally occurring or man-made. These can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may be reasonably expected to contain at least small amounts of some contaminants. The presence of contaminants does not always indicate that the water poses a health risk. More information about contaminants and potential health effects can be found at [www.epa.gov/safewater](http://www.epa.gov/safewater).

**PROOF OF PUBLICATION**

The State of Mississippi,  
 County of Jones

PERSONALLY CAME before me, the undersigned a Notary Public in and for JONES COUNTY, MISSISSIPPI the OFFICE CLERK of the IMPACT OF LAUREL, a newspaper published in the City of Laurel, Jones County, in said State, who being duly sworn, deposes and says that the IMPACT OF LAUREL is a newspaper as defined and prescribed in § 13-3-31 of the Mississippi Code 1972 Annotated and that the publication of a notice, of which the annexed is a copy, in the matter of

Calhoun Water Association- Annual Water Report

has been made in said paper 1 times consecutively, to-wit:

On the 21 day of June 2023  
 On the      day of      20      
 On the      day of      20      
 On the      day of      20    

*Laquita Ross*
