2022 Annual Drinking Water Quality Report
Clayton Village Water Association, Inc.
PWS#: 0530006
April 2023

RECEIVED
MSDH-WATER SUPPLY

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water.

Contact & Meeting Information

If you have any questions about this report or concerning your water utility, please contact Devin McClain at 662.324.8260. We encourage our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the second Saturday of the month at 9:00 AM at the Clayton Village Association Office.

Source of Water

Our water source is from ground water from four (4) wells drawing from the Gordo Aquifer. The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for our system have received a moderate ranking in terms of susceptibility to contamination.

Period Covered by Report

We routinely monitor for contaminants in your drinking water according to federal and state laws. This report is based on results of our monitoring period of January 1st to December 31st, 2022. In cases where monitoring wasn't required in 2022, the table reflects the most recent testing done in accordance with the laws, rules, and regulations.

As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

Terms and Abbreviations

In the table you may find unfamiliar terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level (AL) : The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Maximum Contaminant Level (MCL): The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG): The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per billion (ppb) or micrograms per liter: one part by weight of analyte to 1 billion parts by weight of the water sample.

Parts per million (ppm) or Milligrams per liter (mg/l): one part by weight of analyte to 1 million parts by weight of the water sample.

Picocuries per liter (pCi/L): picocuries per liter is a measure of the radioactivity in water.

TEST RESULTS

Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measurement	MCLG	MCL	Likely Source of Contamination
Inorganic Contaminants								
10. Barium	N	2019*	.0746	.0494 - .0746	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
13. Chromium	N	2019*	2.2	No Range	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits
14. Copper	N	2018/20*	.3	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
16. Fluoride	N	2019*	.134	.12 - .134	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2018/20*	2	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
Sodium	N	2022	33.7	26.5 – 33.7	ppm	0	0	Road Salt, Water Treatment Chemicals, Water Softeners and Sewage Effluents.
Disinfection By-Products								
81. HAA5	N	2022	1.04	No Range	ppb	0	60	By-Product of drinking water disinfection.
Chlorine	N	2022	1.4	.5 – 1.7	Mg/l	0	MDRL = 4	Water additive used to control microbes

* Most recent sample. No sample required for 2022.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

LEAD INFORMATION

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

VIOLATIONS

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected however the EPA has determined that your water IS SAFE at these levels.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man-made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Clayton Village Water Association, Inc. always strives to supply all of our members the clean and safe potable water. Please help us help you by keeping areas around meters clean and visible. We work around the clock to provide top quality water to every tap. We ask that all our members help us protect our water sources, which are the heart of our community, our way of life and our children's future.

LOCAL

WORK ON SOUTH WASHINGTON

City electric crews were working on Tuesday and will continue working for the rest of the week on South Washington Street changing out utility poles. Please use caution as you travel through this area as traffic may be limited in a single lane. (Photo from Starkville Utilities, for Starkville Daily News)

OBITUARIES

Frances Elizabeth Duncan

Frances Elizabeth Duncan, 91, passed away peacefully in her sleep on April 17, 2023.

A graveside service will be held at 11:00 a.m. on Thursday, April 20, 2023 at Memorial Garden Park Cemetery in Starkville, MS with Bro. Jason Green officiating.

Frances was born on September 25, 1931. She was a member of Meadowview Baptist Church. She retired from Mississippi State Athletic Dining Services with 35 years of service.

Frances is survived by her daughter, Peggy (Jerry) Ray; two granddaughters, Robin (Bob) Rufford and Jan (Claris) Collier. She had four great grandchildren, Ashley (Kevin) Bolei, Drew Jackson, Morgan (Zac) Ray, and Carson Collier. She also had four great great-grandchildren, Jackson and Sawyer Bolei, Hunter Reed, and Collier Robertson, and one brother, Herman Hunt.

She was preceded in death by her husband, Paul Duncan; parents, Herman Hunt and Sadie Wade Hunt; and daughter, Linda Higgs.

The family would like to thank Montgomery Gardens, Legacy Hospice, and all her caregivers for the exceptional care she received the last several years.

You can leave the family a condolence at: www.welldailfunerals.com

2022 Annual Drinking Water Quality Report Clayton Village Water Association, Inc. PWS# 0530006 • April 2023

We are pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality of water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continuously improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water.

Contact & Meeting Information
If you have any questions about this report or concerning your water utility please contact (Drew H. Oates at 662-324-6000). We encourage you to attend customer meetings to be informed and to provide input. If you want more information, please visit one of our regularly scheduled meetings. They are held in the second Saturday of the month at 9:00 AM at the Clayton Village Association Office.

Source Water
Our water source is the ground water from the Hillville aquifer in the Clayton Village area. The aquifer water is naturally soft and contains low levels of iron and manganese. The aquifer water is naturally soft and contains low levels of iron and manganese. The aquifer water is naturally soft and contains low levels of iron and manganese.

As water flows from the surface of the earth to underground, it dissolves naturally occurring minerals and, in some cases, dissolved materials and gases that are found in the ground. The minerals and dissolved materials that are found in the ground include calcium, magnesium, iron, manganese, sodium, and other minerals. These minerals and dissolved materials can be naturally occurring or they can be the result of human activities. Some of the minerals and dissolved materials that are found in the ground include calcium, magnesium, iron, manganese, sodium, and other minerals. These minerals and dissolved materials can be naturally occurring or they can be the result of human activities.

FESTIVAL

Page 1

Mississippi poets who selected the statewide winners.

"We received 202 absolutely wonderful poems from students all across the state. These poems are vivid, insightful, sometimes very funny, sometimes deeply moving, and always totally individual. It was an honor to spend time with these students' work," said Pierce, who in addition to Poet Laureate is a Mississippi State English professor and co-director of the university's Creative Writing program.

The My Town Mississippi Poetry Project, launched in Fall 2022 in collaboration with the Mississippi Center for the Book, and the Mississippi Young Writers Poetry Festival are made possible by a \$50,000 Academy of American Poets fellowship given to Pierce to support a public poetry initiative after being selected a Poet Laureate Fellow in the Academy.

"My goal in launching this project was to help students experience the joy and accomplishment that can come from writing poetry, and from amplifying their own voices, words, and experiences. I wanted the prompt—which asked students to write poems about their hometowns—to emphasize for students the importance and validity of their own lives as subject matter for poetry. Poetry is such a valuable tool in our lives—it can be a source of delight and comfort; it can be an outlet for grief; it can be a way to engage more deeply with the world around us. My hope is that these talented students will continue writing poems and exploring their own voices and creativity," Pierce said.

Selected as the state's Poet Laureate in 2021, Pierce has authored four books of poetry. They include "Danger Days" (Saturnalia, 2020), winner of the 2021 Mississippi Institute of Arts and Letters Poetry Award; "The Turn of Mind" (The World's Turn of Mind, 2016), winner of the 2017 Mississippi Institute of Arts and Letters Poetry Award; and a 2015 national Sustainable Arts Foundation Award; "The Girls of Peculiar" (Saturnalia, 2012), also a winner of the 2013 Mississippi Institute of Arts and Letters Poetry Award; and "Famous Last Words" (Saturnalia, 2008), winner of the Saturnalia Books Poetry Prize.

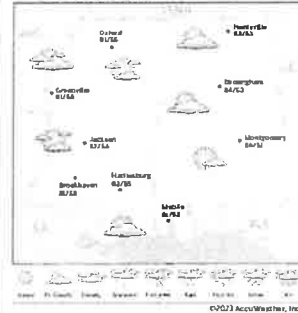

In 2019, Pierce received a Creative Writing Fellowship from the National Endowment for the Arts. She also has won a 2020 Mississippi Arts Commission Literary Artist Fellowship for her poetry, a 2020 Pushcart Prize for her poem "Entreaty," and a 2018 Pushcart Prize for her poem "I Keep Getting Books about Birds."

Pierce, a Delaware native, earned a Bachelor of Arts degree from Pennsylvania's Susquehanna University, Master of Fine Arts degree from Ohio State University, and doctoral degree from the University of Missouri. Her poems also have appeared in "The Best American Poetry," American Poetry Review, The Nation, Boston Review and "The Southern Review," among many other publications. For more, visit www.english.ms-state.edu for more information about MSU's Department of English.
