2022 Annual Drinking Water Quality Report Southwest Wayne Water Association PWS#: 0770007 June 2023

RECEIVED
MSDH-WATER SUPPLY
2023 JUN 13 PM 2: 16

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water.

Contact & Meeting Information

If you have any questions about this report or concerning your water utility, please contact Albert Landrum at 601.735.4786. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Thursday after the third of each month at 6:00 PM at the SWWA Business office located at 1668 HWY 63, Waynesboro, MS.

Source of Water

Our water source is from wells drawing from the Miocene Aquifer. The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Southwest Wayne Water Association have received a moderate susceptibility ranking to contamination.

Period Covered by Report

We routinely monitor for contaminants in your drinking water according to federal and state laws. This report is based on results of our monitoring period of January 1st to December 31st, 2022. In cases where monitoring wasn't required in 2022, the table reflects the most recent testing done in accordance with the laws, rules, and regulations.

As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

Terms and Abbreviations

In the table you may find unfamiliar terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

<u>Action Level (AL)</u>: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

<u>Maximum Contaminant Level (MCL)</u>: The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

<u>Maximum Contaminant Level Goal (MCLG)</u>: The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

<u>Maximum Residual Disinfectant Level (MRDL)</u>: The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

<u>Maximum Residual Disinfectant Level Goal (MRDLG)</u>: The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per billion (ppb) or micrograms per liter: one part by weight of analyte to 1 billion parts by weight of the water sample.

Parts per million (ppm) or Milligrams per liter (mg/l): one part by weight of analyte to 1 million parts by weight of the water sample.

				TEST F	RESULT	ΓS		
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measure- ment	MCLG	MCL	Likely Source of Contamination
Inorgani	c Conta	aminan	ts					
10. Barium	N	2022	.0101	.00780101	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits

16. Fluoride	N	2022	.189	4123189	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2018/20*	1	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
Unregula	ated Co	ntamin	ants					
Sodium	N	2019*	51000	48000 - 51000	PPB	0	0	Road Salt, Water Treatment Chemicals, Water Softeners and Sewage Effluents.
Disinfecti	on By-	Product	S					
81. HAA5	N	2022	2.63	No Range	ppb	0	60	By-Product of drinking water disinfection.
82. TTHM [Total trihalomethanes]	N	2022	5.79	No Range	ppb	0	80	By-product of drinking water chlorination.
Chlorine	N	2022	1.4	.8 – 2	mg/l	0	MDRL = 4	Water additive used to control microbes

^{*} Most recent sample. No sample required for 2022.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

LEAD INFORMATION

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

VIOLATIONS

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected, however the EPA has determined that your water IS SAFE at these levels.

UNREGULATED CONTAMINANTS

Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulations are warranted.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man-made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice

about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Southwest Wayne Water Association works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

NOTICE: This report will not be mail mailed to each customer, however a copy can be obtained at our office during business hours at no charge.

SHOOTING: Suspect turns self in; Ashley says warrants issued, more arrests expected in future

On Sunday, Hartfield had returned to work and was placed on light dute assignments. Ashley said Hartfield felt like he could reach over and grab the scales without coming into contact with the drugs and that playes were not being used at the time, He added that the area where the drugs were located was sealed if until officials could arrive to remove them and that both the WPD and agents with the WRSsissippi Bureau of Narcottes conducted hazardous material operations to secure and later remove the drugs.

later remove the drugs,
"I just want to thank Wayne General Hospi-

tal, the Wayneshoro Fire Department and es-pecially Fire Chief (Willard) Buster Crucker for all of their help," Ashley said, "Chief Crucker

performed decontamination on everyone who needed it after being involved in this incident." Booked into the Wayne County Adult Deten-tion Center was Kiara Demonte Lacey, 34, of Woulard Bend River Road in State Line, He was charged with aggravated assault (because

On Tuesday, June 6, various arrest warrants were signed by Justice Court Judge Charles Clappnan, Search warrants were executed and additional such as the same of the same

the drugs sickened the deputy), prosession of methamphetamine with intent to distribute, felony possession of coarne and felony possession of marijuana.

Ashley said a pag with more than 100 pills along with liquid methamphetamine, cocaine, marijuana, scales and other paraphernalia was seized in the incident, The substances are being sent to the Crime Lab for randysis.

Ashleysaid more charges could be added as the investigation conditions.

the investigation continues.
The sheriff also warned residents not to pick

up any suspicious packages that appear to

contain drugs. Instead, he urges residents to contain drings, instead, no fil ges restocuts to immediately call 93-15 so the material can be handled properly. Justice Court Judge Charles Chapman set hond at \$805,000 and as of press time be was still in the Wayne County Adult Detention

Center
The case is expected to be presented to the next session of the Wayne County Grand Jury.

The recent cuts in state income taxes was also pointed out, with the lieutenant governor saying the goal is to cut it down to 4 percent over the next two years.

"This has been the largest

tax cut for individuals in our state's history. he said. "Now, we are No. 14 in lowest state income tax rates and five of

those ahead of us don't have

any income taxes."

Hosemann added that the

These and the sease is still focused on helping hing industry to the southeast region of the state. "We continue to look for another timber mill down here," he said.
