

RECEIVED  
MSDH-WATER SUPPLY  
2023 JUL 27 AM 7:48

## Certification

<u>Water systems serving 10,000 or more must use:</u> Distribution Method I	
<u>Water systems serving 500 - 9,999 must use:</u> Distribution Method I OR Distribution Method II, III, and IV	
<u>Water system serving less than 500 people must use:</u> Distribution Method I OR Distribution Method II, III, and IV OR Distribution Method III and IV	
OFFICE USE ONLY	
Public Water Supply name(s):	7-digit Public Water Supply ID #(s):
Savannah Water System	780012 - Cell # 142
<b>Distribution</b> (Methods used to distribute CCR to our customers)	
<input type="checkbox"/> I. CCR directly delivered using one or more method below:	
<input type="checkbox"/> *Provided direct Web address to customer <input type="checkbox"/> Hand delivered <input checked="" type="checkbox"/> Mail paper copy <input type="checkbox"/> Email	*Add direct Web address (URL) here:  Example: "The current CCR is available at <a href="http://www.waterworld.org/ccrMay2023/0830001.pdf">www.waterworld.org/ccrMay2023/0830001.pdf</a> call (000) 000-0000 for paper copy".
<input checked="" type="checkbox"/> II. Published the complete CCR in the local newspaper.	Date(s) published: June 23, 2023
<input type="checkbox"/> III. Inform customers the CCR will not be mailed but is available upon request. List method(s) used (examples -- newspaper, water bills, newsletter, etc.).	Date(s) notified:
	Location distributed:
<input type="checkbox"/> IV. Post the complete CCR continuously at the local water office. <input type="checkbox"/> "Good Faith Effort" in other public buildings with the water system service area (i.e. City Hall, Public Library, etc.)	Date:
	Locations posted:
<b>Certification</b>	
This Community public water system confirms it has distributed its Consumer Confidence Report (CCR) to its customers and the appropriate notices of availability have been given and that the information contained in its CCR is correct and consistent with the compliance monitoring data previously submitted to the MS State Department of Health, Bureau of Public Water Supply and the requirements of the CCR rule.	
Name: Deborah Martin	Title: Vice-President
	Date: 6-15-23
<b>Submittal</b>	
Email the following required items to <a href="mailto:water_reports@msdh.ms.gov">water_reports@msdh.ms.gov</a> regardless of distribution methods used.	
1. CCR (Water Quality Report)      2. Certification      3. Proof of delivery method(s)	

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water.

#### Contact & Meeting Information

If you have any questions about this report or concerning your water utility, please contact Deborah Martin at 662.552.2650. We want our valued customers to be informed about their water utility. Please attend meeting scheduled for the first Saturday of January at 6:00 PM at the McDowell Home in Clarkson, MS.

#### Source of Water

Our water source is from wells drawing from the Gordo Aquifer. The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the our system have received lower to moderate susceptibility rankings to contamination.

#### Period Covered by Report

We routinely monitor for contaminants in your drinking water according to federal and state laws. This report is based on results of our monitoring period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2022. In cases where monitoring wasn't required in 2022, the table reflects the most recent testing done in accordance with the laws, rules, and regulations.

As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

#### Terms and Abbreviations

In the table you may find unfamiliar terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level (AL) : The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Maximum Contaminant Level (MCL): The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG): The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per billion (ppb) or micrograms per liter: one part by weight of analyte to 1 billion parts by weight of the water sample.

Parts per million (ppm) or Milligrams per liter (mg/l): one part by weight of analyte to 1 million parts by weight of the water sample.

## TEST RESULTS

Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measurement	MCLG	MCL	Likely Source of Contamination
<b>Inorganic Contaminants</b>								
8. Arsenic	N	2022	3.7	3.4 – 3.7	ppb	n/a	10	Erosion of natural deposits; runoff from orchards; runoff from glass and electronics production wastes
10. Barium	N	2022	.159	.128 - .159	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
13. Chromium	N	2022	.8	.5 - .8	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits
14. Copper	N	2018/20*	.1	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
16. Fluoride	N	2022	.221	.21 - .221	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2018/20*	3	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
21. Selenium	N	2022	5.2	3.5 – 5.2	ppb	50	50	Discharge from petroleum and metal refineries; erosion of natural deposits; discharge from mines
<b>Unregulated Contaminants</b>								
Sodium	N	2019*	160000	130000 - 160000	ppb	0	0	Road Salt, Water Treatment Chemicals, Water Softeners and Sewage Effluents.
<b>Disinfection By-Products</b>								
81. HAA5	N	2022	13.4	No Range	ppb	0	60	By-Product of drinking water disinfection.
82. TTHM [Total trihalomethanes]	N	2021*	2.8	No Range	ppb	0	80	By-product of drinking water chlorination.
Chlorine	N	2022	.4	.2 – 1.4	mg/l	0	MDRL = 4	Water additive used to control microbes

\* Most recent sample. No sample required for 2022.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

### LEAD INFORMATION

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

### VIOLATIONS

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected, however the EPA has determined that your water IS SAFE at these levels.

### UNREGULATED CONTAMINANTS

Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulations are warranted.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man-made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbiological contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Savannah Water Association works around the clock to provide top quality water to every tap. We ask that all our students help us protect our water sources, which are the heart of our community, our way of life and our children's future.

**PROOF OF PUBLICATION  
STATE OF MISSISSIPPI  
COUNTY OF WEBSTER**

PERSONALLY appeared before me the undersigned authority in and for said County and State, Kelly Thompson, of The Webster Progress-Times, a newspaper printed and published in said County, who being duly sworn, deposes and says that the publication of this notice hereto affixed has been made in said newspaper for 1 consecutive week(s), to-wit:

Vol. 96, No. 25, on the 23, day of JUNE 2023

Vol. 96, No.     , on the     , day of      2023

Vol. 96, No.     , on the     , day of      2023

Vol. 96, No.     , on the     , day of      2023

By: Kelly Thompson  
(newspaper)

Sworn to and subscribed to this the 23rd day of June, 2023, by the undersigned Notary Public of said County and State.

Chastie Fisher  
(Notary)

2022 Annual Drinking Water Quality Report  
Savannah Water Association  
PWS# MS 0700012  
June 2023

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality of water and services we deliver to you every day. Our intent is to provide you with the facts and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to providing the quality of your water.

Contact & Meeting Information

If you have any questions, need more information or concerning your water utility, please contact Deborah Martin at 866-869-2830. We want our customers to be informed about their water utility. Please attend meetings scheduled for the first Monday of January at 6:00 PM at the Water and Sewer Plant in Colbert, MS.

Source of Water

Our water source is from wells screened from the Gardo Aquifer. The surface water treatment has been optimized for the public water system to determine the overall acceptability of its drinking water supply to identify potential sources of contaminants. A report containing data and information on how the acceptability determination was made has been furnished to our public water system and is available for viewing upon request. The wells for the system have received a layer of moderate susceptibility ranking to contamination.

Period Covered by Report

We routinely monitor for contaminants in your drinking water, according to federal and state laws. This report is based on results of our monitoring period of January 1st to December 31st, 2022. In cases where monitoring wasn't required in 2022, this table reflects the most recent testing done in accordance with the laws, rules, and regulations.

An water sample over the surface of land or underground, if they have naturally occurring minerals and in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity. Inorganic contaminants such as viruses and bacteria, that may come from various treatment plants, water systems, agricultural practices, open air, and wildlife. Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from other surface water runoff. Inorganic, or metallic, water contaminants, all and the production, mining, or farming practices and byproducts, which may come from a variety of sources such as agriculture, urban storm water runoff, and other industrial processes, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and also come from gas stations and water systems, radioactive contaminants, which can be naturally occurring or be the result of mining or production and refining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All-day water, including bottled water, may be occasionally supplied to contain a level of small amounts of these contaminants. It is important to understand that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

Units and Abbreviations

In the table you may find unfamiliar terms and abbreviations you might not be familiar with. To help you better understand these terms, we've provided the following definitions:

**Maximum Allowable Groundwater (MAGW)** - The concentration of a contaminant in water that is considered highest considered for a water system.

**Maximum Contaminant Level Goal (MCLG)** - The Maximum Allowable Groundwater (MAGW) is the highest level of a contaminant that is allowed in drinking water. MCLGs are set as close to the MCLGs as feasible using the best available scientific technology.

**Maximum Contaminant Level (MCL)** - The (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLs are set as close to the MCLGs as feasible using the best available scientific technology.

**Maximum Contaminant Level (MCL)** - The (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLs are set as close to the MCLGs as feasible using the best available scientific technology.

**Maximum Contaminant Level (MCL)** - The (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLs are set as close to the MCLGs as feasible using the best available scientific technology.

**Maximum Contaminant Level (MCL)** - The (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLs are set as close to the MCLGs as feasible using the best available scientific technology.

TEST RESULTS

Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or % of Samples Exceeding MCL/AGL	Unit Measure (ppm)	MCLG	MCL	Level of Contamination
<b>Inorganic Contaminants</b>								
8. Arsenic	N	1/2/22	0.1	0.4 - 3.7	ppm	0.05	10	Exceeds of natural deposits, runoff from structures, runoff from glass and ceramics, phosphate wastes
10. Chloride	N	1/2/22	1.0	1.0 - 2.0	ppm	1.0	2	Discharge of drilling wastes, discharge from metal refineries
12. Chloride	N	2/2/22	0.5	0.5 - 1.0	ppm	1.0	100	Discharge from steel and pipe mills, discharge of natural deposits
14. Copper	N	1/16/22	0	0	ppm	1.3	AL-1.3	Corrosion of household plumbing

Parts per million (ppm) is a unit of measurement for mass by weight of the water sample.
