Water systems serving 10,000 or more must use:
Distribution Method I

Water systems serving 500 - 9,999 must use:
Distribution Method I OR
Distribution Method II, III, and IV

Water system serving less than 500 people must use:
Distribution Method I OR
Distribution Method II, III, and IV OR
Distribution Method III and IV

OFFICE USE ONLY

Public Water Supply name(s):
**TOWN OF RALEIGH
WATER DEPARTMENT**

7-digit Public Water Supply ID #(s):
0650008

Distribution (Methods used to distribute CCR to our customers)

I. CCR directly delivered using one or more method below:

- *Provided direct Web address to customer
- Hand delivered
- Mail paper copy
- Email

*Add direct Web address (URL) here:

Example: "The current CCR is available at www.waterworld.org/ccrMay2023/0830001.pdf. call (000) 000-0000 for paper copy".

II. Published the complete CCR in the local newspaper.

Date(s) published:
5-31-23

III. Inform customers the CCR will not be mailed but is available upon request.
List method(s) used (examples -- newspaper, water bills, newsletter, etc.).

Date(s) notified:

Location distributed:

IV. Post the complete CCR continuously at the local water office.
 "Good Faith Effort" in other public buildings with the water system service area (i.e. City Hall, Public Library, etc.)

Date:

Locations posted:

Certification

This Community public water system confirms it has distributed its Consumer Confidence Report (CCR) to its customers and the appropriate notices of availability have been given and that the information contained in its CCR is correct and consistent with the compliance monitoring data previously submitted to the MS State Department of Health, Bureau of Public Water Supply and the requirements of the CCR rule.

Name: **Edwin J. Sanders**

Title: **Spun Clerk**

Date: **6-1-23**

Submittal

Email the following required items to water.reports@msdh.ms.gov regardless of distribution methods used.
1. CCR (Water Quality Report) 2. Certification 3. Proof of delivery method(s)

2022 Annual Drinking Water Quality Report
Town of Raleigh
PWS#: 0650008
May 2023

RECEIVED
MSDH-WATER SUPPLY
2023 JUN 13 PM 2: 16

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water.

Contact & Meeting Information

If you have any questions about this report or concerning your water utility, please contact Angela Pickering at 601.782.4672. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Tuesday of the month at 5:30 PM at the Town Hall at 150 Main Street., Raleigh, MS.

Source of Water

Our water source is from wells drawing from the Sparta Sand Aquifer. The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Town of Raleigh have received lower susceptibility rankings to contamination.

Period Covered by Report

We routinely monitor for contaminants in your drinking water according to federal and state laws. This report is based on results of our monitoring period of January 1st to December 31st, 2022. In cases where monitoring wasn't required in 2022, the table reflects the most recent testing done in accordance with the laws, rules, and regulations.

As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

Terms and Abbreviations

In the table you may find unfamiliar terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level (AL) : The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Maximum Contaminant Level (MCL): The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG): The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per billion (ppb) or micrograms per liter: one part by weight of analyte to 1 billion parts by weight of the water sample.

Parts per million (ppm) or Milligrams per liter (mg/l): one part by weight of analyte to 1 million parts by weight of the water sample.

Picocuries per liter (pCi/L): picocuries per liter is a measure of the radioactivity in water.

TEST RESULTS

Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measurement	MCLG	MCL	Likely Source of Contamination
Radioactive Contaminants								
6. Radium 226 Radium 228	N	2019*	.13 .7	No Range	pCi/L	0	5	Erosion of natural deposits
Inorganic Contaminants								
10. Barium	N	2022	.001	.0006 - .001	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
14. Copper	N	2018/20*	.1	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
16. Fluoride	N	2022	.166	.163 - .166	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2018/20*	1	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
Disinfection By-Products								
81. HAA5	N	2022	4.15	3.99 – 4.15	ppb	0	60	By-Product of drinking water disinfection.
82. TTHM [Total trihalomethanes]	N	2022	5.27	2.93 – 5.27	ppb	0	80	By-product of drinking water chlorination.
Chlorine	N	2022	1.9	.7– 3.3	mg/l	0	MRDL = 4	Water additive used to control microbes

* Most recent sample. No sample required for 2022.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

LEAD INFORMATION

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

VIOLATIONS

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected, however the EPA has determined that your water IS SAFE at these levels.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man-made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Town of Raleigh works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

Our annual Quality Water Report. This report is designed to inform you about the quality water and our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to continually improve the water treatment process and protect our water resources. We are committed to you.

Contact
 If you have any questions concerning your water utility, please contact Angela Pickering at 801.782.4672. We want our water users to be satisfied. If you want to learn more, please attend any of our regularly scheduled meetings of the month at 6:30 PM at the Town Hall at 150 Main Street, Raleigh, MS.

Source
 Our water is from the Sparta Sand Aquifer. The source water assessment has been completed for our public water supply to identify potential sources of contamination. A report containing susceptibility determinations was made has been furnished to our public water system and is available for the Town of Raleigh have received lower susceptibility rankings to contamination.

Period
 We monitor drinking water according to federal and state laws. This report is based on results of our monitoring 31st 2022. In cases where monitoring wasn't required in 2022, the table reflects the most recent laws, rules, and regulations.

As water is drawn from the ground, it dissolves naturally occurring minerals and, in some cases, radioactive elements. Contaminants from the presence of chemicals or from human activity, including microbial contaminants, can also be found in water. Sewage treatment plants, septic systems, agricultural livestock operations, and residential uses can be sources of contamination. Other sources include urban storm water runoff, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources including urban storm water runoff, and residential uses; organic chemical contaminants, including synthetic materials and by-products of industrial processes and petroleum production; and radon, which can be found in some groundwater. EPA prescribes regulations that limit the amount of certain inorganic and organic chemical contaminants in drinking water that are known to cause health concern. EPA also prescribes regulations that limit the amount of certain radioactive contaminants in drinking water that are known to cause health concern. It's important to remember that the presence of these contaminants does not necessarily pose a health risk.

Terms
 In the list of abbreviations you might not be familiar with. To help you better understand these terms, we've provided definitions for some of the most common abbreviations used in this report.

Alert
 A contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Maximum Allowable (MCL)
 The highest level of a contaminant that is allowed in drinking water. MCLs are enforceable through the use of the best available treatment technology.

Maximum Contaminant Level Goal (MCLG)
 The level of a contaminant in drinking water below which there is no known or expected adverse health effects. MCLGs are not enforceable because they represent a margin of safety.

Maximum Disinfectant Level (MDL)
 The highest level of a disinfectant allowed in drinking water. There is convincing evidence that disinfectants are necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG)
 The level of a drinking water disinfectant below which there is no known or expected adverse health effects. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per billion (ppb)
 One part by weight of analyte to 1 billion parts by weight of the water sample.

Parts per million (ppm)
 One part by weight of analyte to 1 million parts by weight of the water sample.

Radioactivity
 A measure of the radioactivity in water.

TEST RESULTS

PROOF OF PUBLICATION

**The State of Mississippi,
 County of Smith**

PERSONALLY CAME before me, the undersigned a Notary Public in and for SMITH COUNTY, MISSISSIPPI the OFFICE CLERK of the SMITH COUNTY REFORMER, a newspaper published in the Town of Raleigh, Smith County, in said State, who being duly sworn, deposes and says that the SMITH COUNTY REFORMER is a newspaper as defined and prescribed in § 13-3-31 of the Mississippi Code 1972 Annotated and that the publication of a notice, of which the annexed is a copy, in the matter of

Town of Raleigh- Annual Water Report

has been made in said paper 1 times consecutively, to-wit:

On the 31 day of May 2023

On the _____ day of _____ 20____

On the _____ day of _____ 20____

On the _____ day of _____ 20____

Laguna Ross
 OFFICE CLERK

SWORN to and subscribed before me, this the

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water.

Contact & Meeting Information

If you have any questions about this report or concerning your water utility, please contact Angela Pickering at 801.782.4872. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Tuesday of the month at 6:30 PM at the Town Hall at 150 Main Street, Raleigh, MS.

Source of Water

Our water source is from wells drawing from the Sparta Sand Aquifer. The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Town of Raleigh have received lower susceptibility rankings to contamination.

Period Covered by Report

We routinely monitor for contaminants in your drinking water according to federal and state laws. This report is based on results of our monitoring period of January 1st to December 31st, 2022. In cases where monitoring wasn't required in 2022, the table reflects the most recent testing done in accordance with the laws, rules, and regulations.

As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity: microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

Terms and Abbreviations

In the table you may find unfamiliar terms and abbreviations you might not be familiar with. To help you better understand these terms, we've provided the following definitions:

Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Maximum Contaminant Level (MCL): The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG): The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): This level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per billion (ppb) or micrograms per liter: one part by weight of analyte to 1 billion parts by weight of the water sample.

Parts per million (ppm) or Milligrams per liter (mg/l): one part by weight of analyte to 1 million parts by weight of the water sample.

PicoCurie per liter (pCi/L): picocuries per liter is a measure of the radioactivity in water.

TEST RESULTS

Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measurement	MCLG	MCL	Likely Source of Contamination
Radioactive Contaminants								
8. Radium 226 Radium 228	N	2019*	.13 .7	No Range	pCi/L	0	0	Erosion of natural deposits
Inorganic Contaminants								
10. Barium	N	2022	.001	.0006 - .001	ppm	2	2	Discharge of drilling wastes; discharge from mobile refineries; erosion of natural deposits
14. Copper	N	2018/20*	1	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
16. Fluoride	N	2022	.168	.163 - .168	ppm	4	4	Erosion of natural deposits; water bodies which produce strong leach leachings from fertilizer and agricultural practices
17. Lead	N	2018/20*	0	0	ppb	0	AL=15	Corrosion of household plumbing systems; erosion of natural deposits
Disinfection By-Products								
91. HAAs	N	2022	4.15	3.66 - 4.15	ppb	0	50	By-product of drinking water disinfection
92. THMs (Total Trihalomethanes)	N	2022	5.27	2.89 - 5.27	ppb	0	80	By-product of drinking water disinfection
Chlorine	N	2022	1.8	1.7 - 1.9	mg/L	0	MRDL=4	Water-soluble used to control microbes

* Most recent sample. No samples collected in 2022.
 We are required to monitor both drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies customers of any missing samples prior to the end of the compliance period.

LEAD INFORMATION
 Elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is designed to provide high quality drinking water, but cannot control the variety of materials used in plumbing components. When these components wear or corrode over time, they can release lead into your drinking water. To minimize this potential for lead in drinking water, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before you use the water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested for lead. For more information on testing methods and steps you can take to minimize exposure, information is available from the Safe Drinking Water Hotline at 1-800-426-4731 or at <http://www.epa.gov/lead/>. The Mississippi State Department of Health Public Health Laboratory can also be contacted at 662-478-7582 if you wish to have your water tested.

While our system had no violations, we're proud that your drinking water meets or exceeds all Federal and State drinking water standards. While we've learned through our monitoring and testing that some contaminants have been detected, however the EPA has determined that your water is SAFE to drink.

While we are subject to potential contamination by substances that are naturally occurring or man-made. These substances include trace amounts of organic chemicals and radioactive substances. All drinking water, including bottled water, is expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate a health risk. More information about contaminants and potential health effects can be obtained from the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4731.

Some people are more vulnerable to contaminants in drinking water than the general population. Infants and children, pregnant women, the elderly, and people with compromised immune systems, people who have undergone chemotherapy, people who have kidney disease, people with HIV/AIDS, and people who are taking certain medications can be particularly at risk from radon. These people should seek advice from their health care providers. EPA's CCLC publishes on special lists to assist the risk of radon by providing information on radon testing and mitigation. For more information on radon testing and mitigation, visit the Safe Drinking Water Hotline 1-800-426-4731.

We continue to work to provide high quality water to every tap. We ask that all our customers help us protect our water resources by conserving water and properly disposing of household chemicals and hazardous waste.
