

THE MISSISSIPPI OPIOID AND HEROIN DATA COLLABORATIVE

**Provisional Data Report
Second Quarter (April - June) 2024**

Mississippi Board of Pharmacy

Mississippi Bureau of Narcotics

Mississippi State Department of Health

Mississippi Department of Mental Health

Mississippi Public Health Institute

07/05/2024

DATA AND REPORT OVERVIEW

- This report summarizes data on opioid prescriptions dispensed in Mississippi, fatal drug overdoses reported to the Mississippi Bureau of Narcotics, naloxone administrations by Emergency Medical Services for suspected overdoses, drug-related arrests, and treatment services for opioid-related disorders within facilities certified by the Mississippi Department of Mental Health.
- The goal of this report is to provide timely and accurate information to public and policy makers on key indicators measuring the scope and severity of the opioid epidemic in Mississippi. The findings reported here, therefore, aim to inform and support data-driven decision-making. This report is updated quarterly to foster continuous quality improvement.
- All of the statistics featured in this report are based on available data. Data availability limitations vary somewhat across reported indicators. Detailed information regarding each of the data sources used in the report is presented in the technical notes on page 2.

Opioid prescriptions

Overdose deaths

Treatments for opioid use disorders

Naloxone administrations

Drug-related arrests

This project was supported by the following grants:

The State Opioid Response (SOR) Grant No. TI083319 awarded by the Substance Abuse and Mental Health Services Administration (SAMHSA). The SOR program aims to address the opioid crisis by increasing access to medication-assisted treatment using the three FDA-approved medications for the treatment of opioid use disorder, reducing unmet treatment need, and reducing opioid overdose-related deaths through the provision of prevention, treatment, and recovery activities for opioid use disorder (OUD) (including the illicit use of prescription opioids, heroin, and fentanyl and fentanyl analogs). This program also supports evidence-based prevention, treatment, and recovery support services to address stimulant misuse and use disorders, including for cocaine and methamphetamine.

Mississippi COAP (Comprehensive Opioid Abuse Program) for Grant Period 2018 – 2022, was a data quality improvement initiative funded by the Office of Justice Programs. COAP enhanced the quality of Mississippi's data on state-level opioid overdoses and related risk factors. Such data are necessary to conduct ongoing monitoring of the impact of opioid overdoses and related challenges within the state. They also provide opportunities for data-driven opioid problem mitigation.

** The original formatting for these reports was developed by Manuela Staneva, MPH, Epidemiologist, Mississippi State Department of Health.*

TECHNICAL NOTES

Data Sources

Prescription Monitoring Program (PMP): The PMP is a statewide electronic database designed to collect information on the dispensing of controlled substances. These data are used to inform the public about current trends in prescription drug use and assist medical professionals in making informed clinical decisions while preventing the illegitimate use of controlled substances. PMP data is collected by the Mississippi Board of Pharmacy. The findings presented in this report include prescriptions for opioid analgesics and opioid-containing cough medications.

Drug-Related Mortality Data: The Mississippi Bureau of Narcotics draws data regarding overdose deaths from information as reported by coroners. In an effort to be consistent, MBN provides the number of overdose deaths that are reported for the quarter in which the death occurred, as determined by the coroner. Additionally, not all coroners report overdose deaths during the period that they occurred due to local variations in reporting capacity. Therefore, the reported data on overdose death counts may be incomplete, thereby creating a possible undercount for any given reporting period.

Mississippi Emergency Medical Services Data: The Mississippi State Department of Health collects state-level data and maintains a cutting-edge database on all episodes of emergency medical care delivered by Emergency Medical Services (EMS). The data set contains structured data elements such as incident date and county, patient demographics, main patient complaint, and medications administered. It should be noted that transitions in data reporting systems may lead to future updates of these data.

Syndromic Surveillance Emergency Department Data: Syndromic surveillance (SynS) provides public health officials with a timely system for detecting, understanding, and monitoring health events. By tracking symptoms of patients in emergency departments—before a diagnosis is confirmed—public health professionals can detect unusual levels of illness to determine whether a response is warranted. Syndromic data can serve as an early warning system for public health concerns and can allow public health officials to characterize the extent of opioid and other drug-related overdoses in communities. Note: As of June 1, 2022, there are 70 health systems submitting SynS Emergency Department data in Mississippi. This figure does not mean just 70 hospitals. For instance, Baptist Memorial is counted as one of the 70 systems; however, they have many hospitals and clinics under one health system. Similarly, the University of Mississippi Medical Center (UMMC) is also counted as one of the 70 systems; however, they have multiple emergency rooms in the Jackson hospital as well as a hospital in Grenada. Overdose data from the SynS Emergency Department indicates patient admission to an emergency department for an overdose. For drug overdose mortality data, see ‘Drug- Related Mortality Data’ reported by MBN.

Treatment Admissions for Opioid Use Disorder: Data included admissions reported by substance use disorder (SUD) treatment providers that are certified by the Mississippi Department of Mental Health (DMH). The data represent outpatient and inpatient services, including medication-assisted treatment, as reported through DMH’s data tracking tool. Treatments delivered within non-DMH certified facilities and general hospital admissions for SUDs are not featured in this report. Estimates reflect the number and types of patients commonly served by publicly funded treatment programs.

Drug-Related Crime Data: The arrest data reflects all drug-related offenses including the manufacture, sales, and possession of any controlled substance. These data may not be complete because of underreporting by local police departments. Additionally, crime statistics are influenced by the scope of law enforcement activities. Greater law enforcement capacity, for example, may lead to increased arrest rates for particular offenses.

Population Estimates for Mississippi: Rates were calculated using the 2023 Mississippi population estimates released by the U.S. Census Bureau. Accessed on 4/15/2024 at: <https://www.census.gov/quickfacts/MS>.

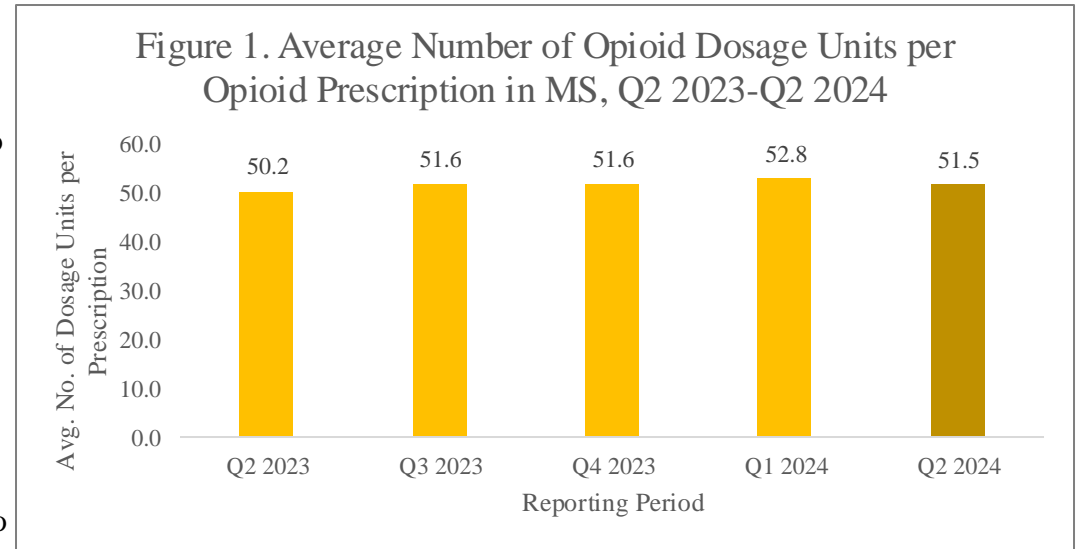

Historical Data: An appendix of previous years’ data can be found at the Mississippi State Department of Health website: https://msdh.ms.gov/msdhsite/_static/44,0,382,740.html.

OPIOID PRESCRIPTIONS AND DOSAGE UNITS DISPENSED

- **Opioid Prescriptions:** In Q2 2024, 566,064 opioid prescriptions were dispensed in Mississippi.
 - On average, 6,289 opioid prescriptions were dispensed every day during this quarter.
 - A 1.53% decrease in the number of opioid prescriptions was observed from Q2 2023 to Q2 2024.
 - In Q2 2024, there were enough opioid prescriptions dispensed for 19.19% of Mississippians to have a prescription.
- **Opioid Dosage Units:** During Q2 2024, over 29 million opioid dosage units (e.g. pills) were dispensed in Mississippi.
 - On average, approximately 323,765 dosage units were dispensed each day during Q2 2024.
 - Compared to Q2 2023, the number of dosage units dispensed decreased by 1.1% or approximately 303 thousand pills in Q2 2024.
 - In Q2 2024, there were enough opioid dosage units dispensed for each Mississippian to have a supply of 9.9 dosage units.

CONSIDERATIONS: This report identified a considerable decline in the number of opioid prescriptions from 2019. This downward trend could be driven by regulation revisions made between 2018 and 2019 by the MS Board of Medical Licensure, MS Board of Nursing, and the MS Board of Dental Examiners as well as educational outreach and prevention efforts.

SUSPECTED DRUG OVERDOSE DEATHS

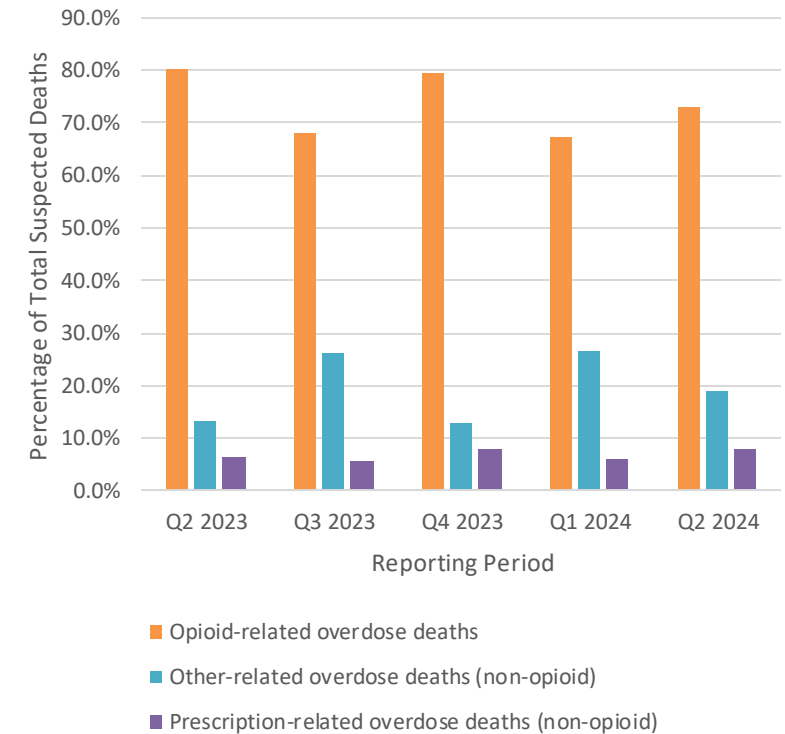

FINDINGS

- In Q2 2024, 46 (73.02%) of the 63 suspected overdose deaths reported to the Mississippi Bureau of Narcotics (MBN) were opioid-related. The number of opioid-related deaths decreased by 6.0% from Q2 2023 to Q2 2024, and the total number of overdose deaths decreased by 3.28%
- The number of deaths involving heroin decreased from Q2 2023 (9 deaths) to Q2 2024 (2 deaths) by 77.78%.
- There were 1.54 opioid-related overdose deaths per 100,000 persons reported to the Mississippi Bureau of Narcotics (MBN) in Q2 2024.
- The number of deaths involving fentanyl increased 11.1% from Q2 2023 (18 deaths) to Q2 2024 (20 deaths).
- 35 of the 63 overall total suspected overdose deaths involved methamphetamine, and 22 of the 46 total opioid related suspected overdose deaths involved methamphetamine.

Table 1. Number of Suspected Overdose Deaths Reported to MBN by Type of Involved Substance, MS, Q2 2023-Q2 2024

	Q2 2023	Q3 2023	Q4 2023	Q1 2024	Q2 2024
Prescription opioid related overdose	10	11	8	9	5
Fentanyl-related deaths	18	17	47	24	20
Fentanyl and prescription-related deaths	10	18	23	20	19
Heroin-related deaths	9	2	1	0	2
Heroin and prescription-related deaths	0	0	0	0	0
Heroin and Fentanyl-related deaths	2	1	2	3	0
<i>Total opioid-related overdose deaths</i>	49	49	81	56	46
Other-related overdose deaths	8	19	13	22	12
Prescription-related overdose deaths	4	4	8	5	5
<i>Total non-opioid related overdose deaths</i>	12	23	21	27	17
Overall total suspected overdose deaths	61	72	102	83	63

Figure 4. Percentage of Total Suspected Deaths by Type of Involved Substance, MS, Q2 2023 - Q2 2024

CONSIDERATIONS: The accurate assessment of drug-related fatalities depends on complete and high-quality data. The reliability of mortality data, however, is impacted by several constraints such as insufficient resources, training, or time for performing thorough death investigations. In addition, Mississippi lacks a centralized system for connecting different entities involved in the compilation and reporting of mortality data. Efficient collaboration among state agencies, educational outreach for coroners, and standardized protocols for drug overdose investigation and reporting are measures that can improve drug-related mortality surveillance. It should also be noted that the MBN does not include a death in the count until a toxicology report has been completed; therefore, currently pending cases may result in increased numbers in the future.

EMS NALOXONE ADMINISTRATIONS

FINDINGS

- Emergency Medical Services (EMS) data revealed that naloxone was administered 629 times during Q2 2024, which is a 21% decrease compared to Q2 2023 (797).
- On average, 209 naloxone administrations were reported in Mississippi each month during the second quarter of 2024.

Figure 5. Naloxone Administrations by EMS: Number of Cases, MS, Q2 2023 - Q2 2024

CONSIDERATIONS: The life-saving drug naloxone, an opioid antagonist, is used to reverse opioid overdose. The emergence and growing popularity of highly toxic synthetic opioid substances require the following state-level actions:

- Facilitating and expanding access to naloxone for patients with opioid use disorders.
- Providing training on naloxone administration for all first responders and all persons at risk for opioid-related overdoses as well as their families, friends, and community members.

IMPORTANT MESSAGE: Figure 5 documents only naloxone distributed through EMS. Additional distribution occurs through the State Opioid Response (SOR) grant and a standing order. In May 2018, State Health Officer of Mississippi, Dr. Mary Currier, signed a standing order that covers, without a prescription, the dispensing and administration of naloxone. The standing order was re-signed by Dr. Paul Byers, State Epidemiologist, in May of 2019, 2020, 2021, 2022, 2023. The standing order has been signed by Dr. Justin Turner for 2024 into 2025.

SUSPECTED OVERDOSE DEATHS AND NALOXONE ADMINSTRATIONS BY COUNTY

FINDINGS

- **Suspected Overdose Deaths:** The top 3 counties Harrison (10), Jackson (8), and DeSoto (6), accounted for 38.1% of all suspected overdose deaths in Q2 2024.
- **Naloxone Administration:** The top 3 counties, Harrison (77), Hinds (50), and Jackson (39), accounted for 26.39% of all EMS naloxone administrations in Q2 2024.

STATE OPIOID RESPONSE GRANT: TREATMENT ADMISSIONS FOR OPIOID USE DISORDERS

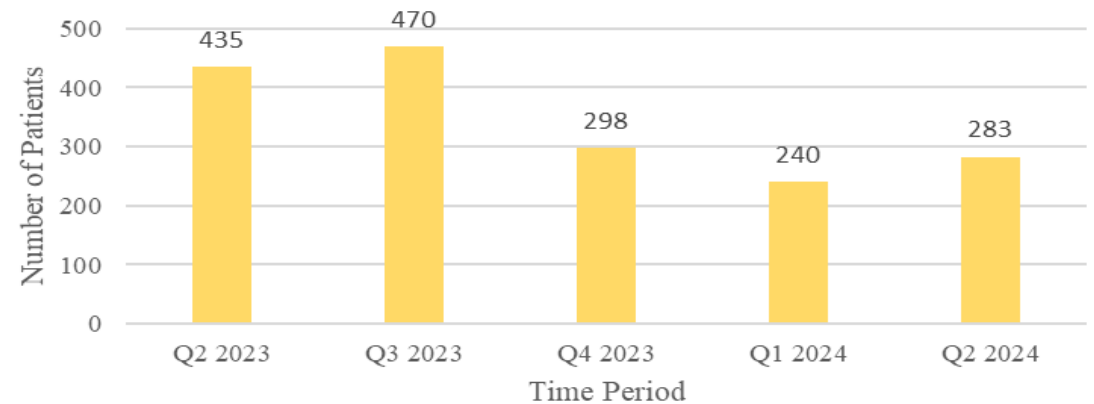

FINDINGS

- Table 2 and Figure 8 report opioid-related admissions to facilities certified by the Department of Mental Health (DMH). Data were collected from clients served by the State Opioid Response (SOR) grant, which provides funding for substance use treatment services at reduced or no cost to underinsured or uninsured people.
- A total of 2,259 (including those with poly-substance use) Mississippians were admitted in Q2 2024 to community mental health centers for all the substance use disorders and 283 (see table 2) for opioid use disorders (includes primary, secondary, and tertiary).
- Opioids were listed as the primary diagnosis for 162 (7.17%) of the 2,259 unique patients admitted in Q2 2024.
- Figure 8 displays the total number of unique patients for whom opioids were a primary, secondary, or tertiary diagnosis. There was a 39.94% decrease in unique patients diagnosed with an opioid use disorder from Q2 2023 to Q2 2024.

Table 2: Unique Patients with Primary, Secondary or Tertiary Opioid Use Disorders

	Q2 2023	Q3 2023	Q4 2023	Q1 2024	Q2 2024
Primary	219	372	162	185	162
Secondary	156	81	90	11	73
Tertiary	60	17	46	44	48
Total	435	470	298	240	283

Figure 8: Total Unique Patients with Opioids as Primary, Secondary, or Tertiary Diagnosis, MS, Q2 2023 - Q2 2024

CONSIDERATIONS: The actual number of unique patients is a best estimate because patients can be admitted to multiple drug treatment programs, relapse, be re-admitted for a different treatment, or re-admitted in a different region.

NOTE: In July 2020, a transition occurred from the historical reporting system to a SAMHSA-recommended statewide reporting system that produces more accurate data. Therefore, some reported numbers may reflect admission and patient miscounting.

STATE OPIOID RESPONSE GRANT: SUBSTANCE USE DISORDER DIAGNOSES

FINDINGS

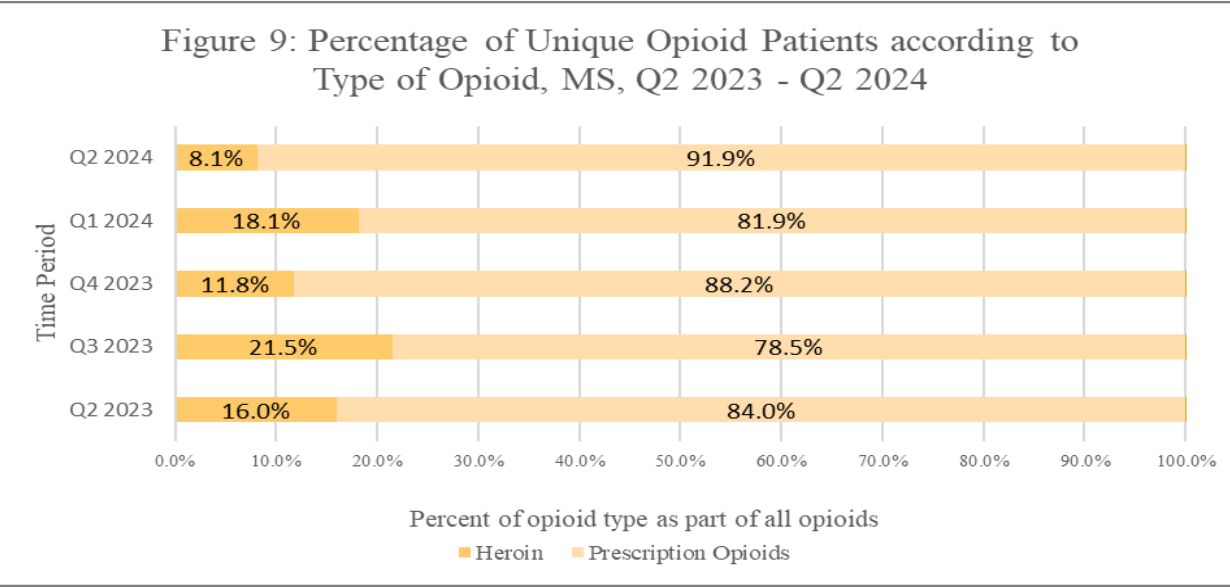

- This page reports all primary, secondary, and tertiary substance use diagnoses as reported by facilities certified by the Department of Mental Health (DMH). The data was collected from clients served by the State Opioid Response (SOR) grant, which provides funding for substance use treatment services at reduced or no cost to *underinsured or uninsured* people.
- Due to the limited population, the persons featured in this data source are not a representative sample of the state’s substance use or opioid use prevalence.
- In Q2 2024, 13.02% of all (primary, secondary, tertiary) substance use diagnoses were opioid-related.
- Compared to Q2 2023, the percentage of people with an opioid use disorder admitted with a heroin diagnosis decreased from Q2 2023 (47) to Q2 2024 (23) by 51.06%.
- The number of people admitted for opioid use disorders increased from Q2 2023 (246) to Q2 2024 (260) by 5.69%.
- Due to the limited populations, these data do not comprise a representative sample of the state’s substance use or opioid use prevalence. This population, however, does provide a stringent test of program effectiveness.

CONSIDERATIONS: The actual number of unique patients is a best estimate because patients can be admitted to multiple drug treatment programs, relapse, be re-admitted for a different treatment, or re-admitted in a different region.

NOTE: In July 2020, a transition occurred from the historical reporting system to a SAMHSA-recommended statewide reporting system that produces more accurate data. Therefore, some reported numbers may reflect admission and patient miscounting.

Table 3: Number of Unique Opioid Patients by Type of Opioid, MS, Q2 2023 – Q2 2024

Type of Drug	Q2 2023	Q3 2023	Q4 2023	Q1 2024	Q2 2024
Heroin	47	129	35	43	23

Methamphetamine	197	360	499	522	500

DRUG-RELATED CRIME DATA

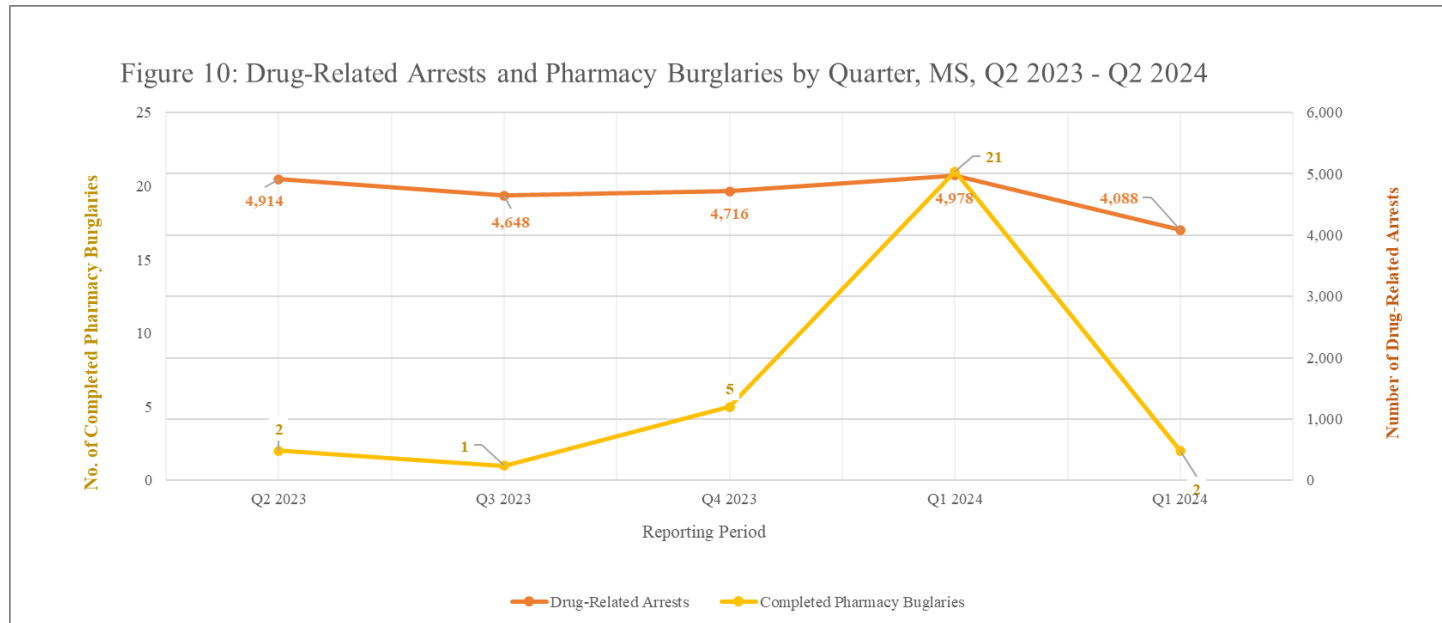

FINDINGS

Drug-Related Arrests:

- The total number of drug-related arrests reported in Q2 2023 was 4,914, which decreased by 16.81% compared to Q2 2024 (4,088).
- In Q2 2024, an average of 45.42 drug-related arrests were reported each day in Mississippi.
- There were 138.58 drug-related arrests per 100,000 persons reported to MBN in Q2 2024.
- In Q2 2024, the highest numbers of drug-related arrests were reported in DeSoto (651), Hinds (434), and Harrison (372) counties. They accounted for 35.64% of all drug-related arrests in Mississippi.

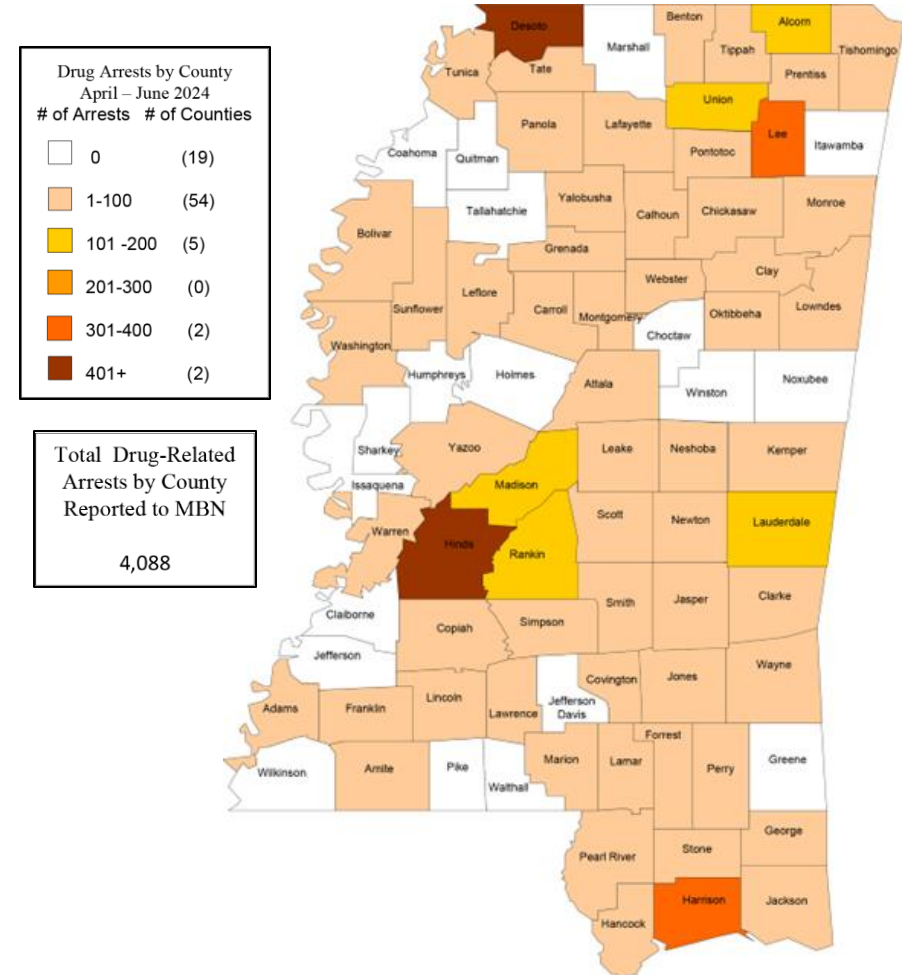

Pharmacy Burglaries:

- In Q2 2024, there were 2 completed pharmacy burglaries which is equal to Q2 2023 (2).
- There was a 0% increase/decrease in completed pharmacy burglaries from Q2 2023 to Q2 2024.

Data Source: Drug-Related Crime (Mississippi Bureau of Narcotics)

Figure 10b. Number of Drug-Related Arrests by County, MS, Q2 2024

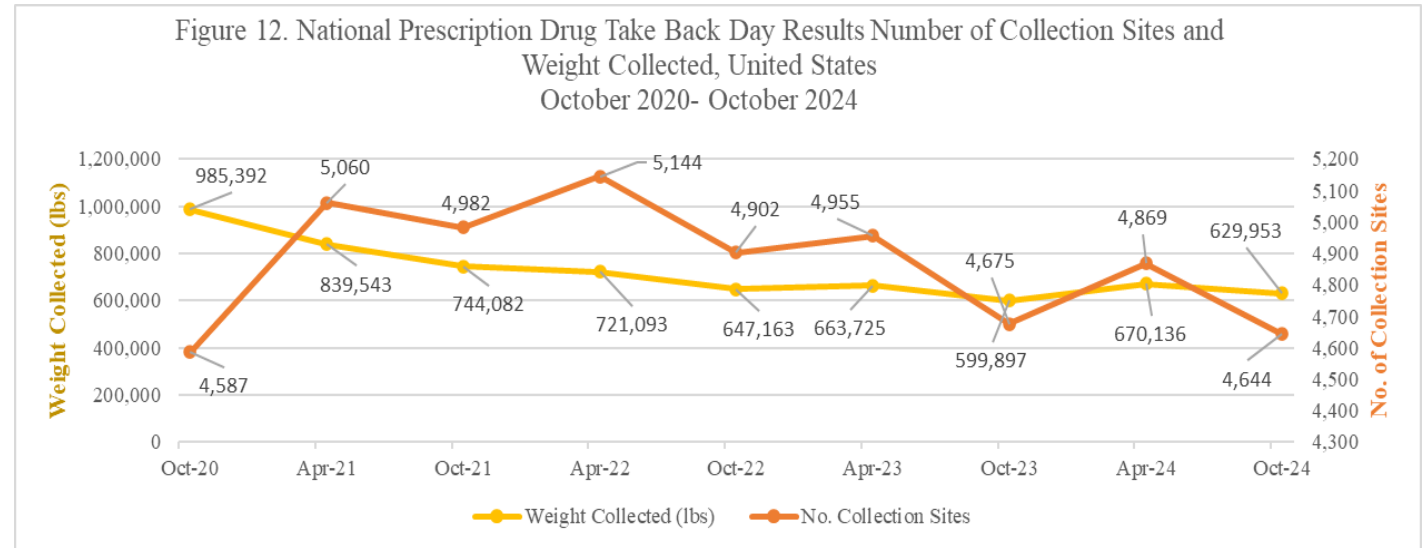

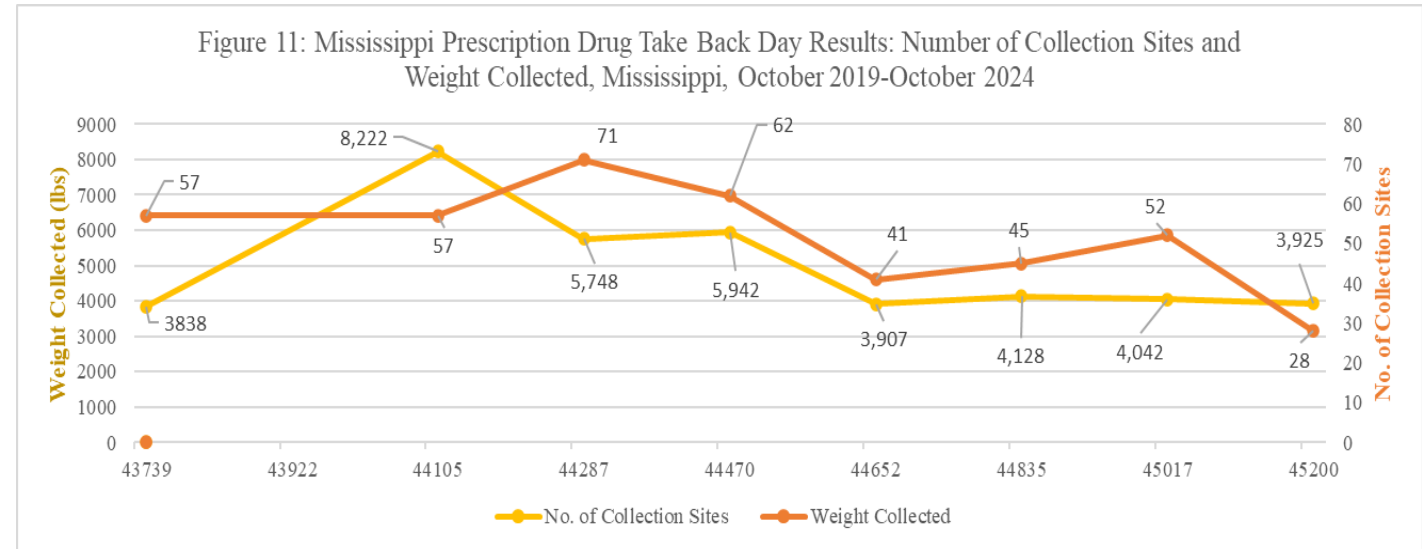

Provisional Data 9

DRUG TAKE BACK DAYS: MISSISSIPPI AND NATIONAL RESULTS

FINDINGS

- The Drug Enforcement Administration (DEA) holds a National Prescription Drug Take-Back Day each year in April and October to collect unused prescription medications. Since its inception, nearly 8.95 tons of drugs have been collected nationwide, with over 32.78 tons collected in Mississippi alone. (see Figure 11).
- In October 2024, a total of 6,290,953 pounds of drugs were collected from 4,644 sites across the United States. During the same event, 3,437 pounds were collected from 46 sites in Mississippi.(see Figure 12).

Announcements and Special Interests

Fentanyl Test Strips

- **Fentanyl Test Strips:** Mississippi's governor, Tate Reeves, signed House Bill 722 to decriminalize possession of Fentanyl test strips beginning July 1, 2023. It is anticipated that this change will help to save lives of Mississippians by giving them a tool to test any drug suspected to contain Fentanyl, which is a powerful synthetic opioid that is responsible for approximately 70,000 overdose deaths annually.
 - Fentanyl is a synthetic opioid that is up to 50 times stronger than heroin and 100 times stronger than morphine. It is a major contributor to fatal and nonfatal overdoses in the U.S.¹
 - There are two types of fentanyl: **pharmaceutical fentanyl** and **illicitly manufactured fentanyl**. Both are considered synthetic opioids. Pharmaceutical fentanyl is prescribed by doctors to treat severe pain, especially after surgery and for advanced-stage cancer.
 - Illicitly manufactured fentanyl (IMF) is available on the drug market in different forms, including liquid and powder.¹
 - Fentanyl and other synthetic opioids are the most common drugs involved in overdose deaths.¹ Even in small doses, it can be deadly. **Over 150 Americans die every day from overdoses related to synthetic opioids like fentanyl.**²

ODFree.org

- <https://odfree.org> is a website created by the Mississippi Public Health Institute in partnership with the Mississippi State Department of Health and content provided through the MOHDC partnership to allow the general public to easily find information regarding:
 - Resources for:
 - Naloxone Information: Includes a link to order a dose of Naloxone to be delivered to your residence.
 - Drug Take Back: Provides the next scheduled DEA Drug Take Back Day with statistics from previous efforts.
 - Request A Town Hall: To discuss the opioid epidemic in the state of Mississippi and have an open forum conversation of how communities can get involved.
 - Pain on the Job: Discusses opioids in the workplace due to job-related injuries and the dangers involved.
 - International Overdose Awareness Day: Brings to light the information for the public to get an overview of just how far-reaching potential overdoses could happen.
 - Professional Resources: Provides links to important resources, such as, Mississippi Behavioral Health Learning Network, Peer Recovery Center of Excellence, National Institute on Drug Abuse Training, U.S. Drug Enforcement Agency Resources, CDC, and SAMHSA.

THE MISSISSIPPI OPIOID AND HEROIN DATA COLLABORATIVE (MSOHDC)

PROJECT DESCRIPTION AND GOALS

Five state agencies have united to transform one of the most formidable drug-related challenges Mississippi has ever faced into an opportunity for developing data-driven policy changes aimed at combating the current opioid epidemic and preventing future drug-related crises.

GOALS
