**INSTRUCTIONS**

Samples must be collected at locations where the highest lead levels are likely to be found. A "Tiering System" has been established to help prioritize your sample sites. The box below defines the tiering system for prioritizing sample sites.

**TIERS FOR COMMUNITY WATER SYSTEMS**

**TIER 1** sampling sites are single family structures:

- ◆ containing copper pipes with lead solder installed **after 1982** OR
- ◆ containing lead pipes OR
- ◆ served by a lead service line

**TIER 2** sampling sites consist of buildings, including multiple family residences:

- ◆ containing copper pipes with lead solder installed **after 1982** OR
- ◆ containing lead pipes OR *We have none*
- ◆ served by a lead service line

*Note: When multiple family residences comprise at least 20% of the structures served by a water system, they may be counted as Tier 1 sites. Should this apply to your system, please indicate this on your plan.*

**TIER 3** sampling sites are single family structures containing copper pipes with lead solder installed **before 1983**.

**OTHER:** If your system does not have enough Tier 1, 2, and 3 Sites to fill up its site plan, then you must use representative sites to complete your plan.
