

THE MISSISSIPPI OPIOID AND HEROIN DATA COLLABORATIVE

Provisional Data Report Calendar Year 2025

**Mississippi Board of Pharmacy
Mississippi Bureau of Narcotics
Mississippi State Department of Health
Mississippi Department of Mental Health
Mississippi Public Health Institute**

7/15/2026

DATA AND REPORT OVERVIEW

- > This report summarizes data on opioid prescriptions dispenses in Mississippi, fatal drug overdoses reported to the Mississippi Bureau of Narcotics, naloxone administrations by Emergency Medical Services for suspected overdoses, drug-related arrests, and treatment services for opioid-related disorders within facilities certified by the Mississippi Department of Mental Health
- > The goal of this report is to provide timely and accurate information to the public and policy makers on key indicators measuring the scope of the opioid epidemic in Mississippi. The findings reported here, therefore, aim to inform and support data-driven decision-making. This report is updated quarterly to foster continuous quality improvement.
- > All of the statistics featured in this report are based on available data, and data availability limitations vary somewhat across reported indicators. The Data Collaborative strives to present the latest data in a quarterly format, but some of the data sources used in this report are only released on an annual basis. Detailed information regarding each of the data sources used in the report is presented in the technical notes on page 2.

This report is the product of a collaborative effort by the following state agencies: Mississippi State Department of Health, Mississippi Department of Mental Health, Mississippi Bureau of Narcotics, Mississippi Board of Pharmacy, and The Mississippi Public Health Institute. The original formatting for these reports was developed by Manuela Staneva, MPH, Epidemiologist, Mississippi State Department of Health.

This project was supported by State Opioid Response (SOR) Grant No. TI083319 awarded by, the Substance Abuse and Mental Health Services Administration (SAMHSA). The program aims to address the opioid crisis by increasing access to medication-assisted treatment using the three FDA-approved medications for the treatment of opioid use disorder, reducing unmet treatment need, and reducing opioid overdose related deaths through the provision of prevention, treatment and recovery activities for opioid use disorder (OUD) (including illicit use of prescription opioids, heroin, and fentanyl and fentanyl analogs). This program also supports evidence-based prevention, treatment and recovery support services to address stimulant misuse and use disorders, including for cocaine and methamphetamine.

TECHNICAL NOTES

Data Sources

Prescription Monitoring Program (PMP): The PMP is a statewide electronic database designed to collect information on the dispensing of controlled substances. These data are used to inform the public about current trends in prescription drug use and assist medical professionals in making informed clinical decisions while preventing the illegitimate use of controlled substances. PMP data is collected by the Mississippi Board of Pharmacy. The findings presented in this report include prescriptions for opioid analgesics and opioid-containing cough medications.

Drug-Related Mortality Data: The Mississippi Bureau of Narcotics collects data on overdose deaths from reports filed by coroners. Deaths are reported for the quarter the overdose occurred regardless of when the coroner's report was received, regardless of when the death occurred. Additionally, not all coroners may report data on overdose deaths. Therefore, the reported data on overdose death counts may be incomplete, thereby creating a possible undercount.

Mississippi Emergency Medical Services Data: The Mississippi State Department of Health collects state-level data and maintains a cutting-edge database on all episodes of emergency medical care delivered by Emergency Medical Services (EMS). The data set contains structured data elements such as incident date and county, patient demographics, main patient complaint, and medications administered. It should be noted that transition in data reporting system may lead to future updates of these data.

Syndromic Surveillance Emergency Department Data: Syndromic surveillance (SynS) provides public health officials with a timely system for detecting, understanding, and monitoring health events. By tracking symptoms of patients in emergency departments—before a diagnosis is confirmed—public health can detect unusual levels of illness to determine whether a response is warranted. Syndromic data can serve as an early warning system for public health concerns and can allow public health officials to characterize the extent of opioid and other drug-related overdoses in communities. Note: As of 8/6/2021, there are 52 health systems submitting SynS Emergency Department data in Mississippi. This does not mean just 52 hospitals. For instance, Baptist Memorial is counted as one of the 52 systems; however, they have many hospitals and clinics under the one health system. Similarly, University of Mississippi Medical Center (UMMC) is also counted as one of the 52 systems; however, they have multiple emergency rooms in the Jackson hospital as well as a hospital in Grenada. Overdose data from SynS Emergency Department indicates patient admission to an emergency department for an overdose. For drug overdose mortality data, see 'Drug-Related Mortality Data' reported by MBN.

Treatment Admissions for Opioid Use Disorder: Data includes admissions reported by substance use disorder (SUD) treatment providers that are certified by the Mississippi Department of Mental Health (DMH). The data represents outpatient and inpatient services, including medication-assisted treatment, as reported through DMH's data tracking tool. Treatments delivered within non-DMH certified facilities and general hospital admissions for SUDs are not featured in this report. Estimates reflect the number and types of patients commonly served by publicly funded treatment programs.

Drug-Related Crime Data: The arrest data reflects all drug-related offenses including the manufacture, sales, and possession of any controlled substance. This data may not be complete because of underreporting by local police departments. Additionally, crime statistics are influenced by the scope of law enforcement activities. Greater law enforcement capacity, for example, may lead to increased arrest rates for particular offenses.

Population Estimates for Mississippi: Rates were calculated using the 2021 Mississippi population estimates released by the U.S. Census Bureau. Accessed on 4/01/2022 at: <https://www.census.gov/quickfacts/MS>

Historical Data: An appendix of previous years' data can be found at the Mississippi State Department of Health website: https://msdh.ms.gov/msdhsite/_static/44.0.382.740.html

OPIOID PRESCRIPTIONS AND DOSAGE UNITS DISPENSED

- **Opioid Prescriptions:** In 2025, over 2.3 million prescriptions were dispensed in Mississippi.
 - On average, 6,310 opioid prescriptions were dispensed every day during 2025.
 - A 4.68% increase in the number of opioid prescriptions was observed from 2023 to 2024.
 - In 2025, there were enough opioid prescriptions dispensed for 78.08% of Mississippians to have a prescription.
- **Opioid Dosage Units:** During 2025, over 120 million opioid dosage units (e.g. pills) were dispensed in Mississippi.
 - On average, approximately 329,693 dosage units were dispensed each day during 2025.
 - Compared to 2024, the number of dosage units dispensed increased by 5% or approximately 5.7 million pills in 2025.
 - In 2024, there were enough opioid dosage units dispensed for each Mississippian to have a supply of 38.8 dosage units.

CONSIDERATIONS: This report identified a considerable decline in the number of opioid prescriptions from 2019. This downward trend could be driven by regulation revisions made between 2018 and 2019 by the MS Board of Medical Licensure, MS Board of Nursing, and the MS Board of Dental Examiners as well as education outreach and prevention efforts.

SUSPECTED DRUG OVERDOSE DEATHS

FINDINGS

- In 2025, 130 (67.71%) of the 314 suspected overdose deaths reported to the Mississippi Bureau of Narcotics (MBN) were opioid-related. The number of opioid-related deaths decreased by 38.9% from 2024 to 2025, and the total number of overdose deaths decreased by 38.85%.
- The number of deaths involving heroin remained the same from 2024 (2 deaths) to 2025 (2 deaths).
- There were 4.3 opioid-related overdose deaths per 100,000 persons reported to the Mississippi Bureau of Narcotics (MBN) in 2025.
- The number of deaths involving fentanyl decreased from 2024 (92 deaths) to 2025 (64 deaths) by 30.43%.

Table 1. Number of Suspected Overdose Deaths Reported to MBN by Type of Involved Substance, MS, 2025*					
	Q1 2025	Q2 2025	Q3 2025	Q4 2025	2025 Total
Prescription opioid related overdose	8	6	8	10	32
Fentanyl related deaths	21	18	18	7	64
Fentanyl and prescription related deaths	12	5	8	2	27
Heroin related deaths	0	2	0	0	2
Heroin and prescription related deaths	0	0	0	0	0
Heroin and Fentanyl related deaths	0	1	1	3	5
Total opioid related overdosedeadths	41	32	35	22	130
Other related overdose deaths	19	12	9	6	46
Prescription related overdosedeadths	5	1	8	2	16
Total non-opioid related overdose deaths	24	13	17	8	62
Overall total suspected overdose deaths	65	45	52	30	192

CONSIDERATIONS: The accurate assessment of drug-related fatalities depends on complete and high-quality data. The reliability of mortality data, however, is impacted by several constraints such as insufficient resources, training, or time for performing thorough death investigations. In addition, Mississippi lacks a centralized system for connecting different entities involved in the compilation and reporting of mortality data. Efficient collaboration among state agencies, educational outreach for coroners, and standardized protocols for drug overdose investigation and reporting are measures that can improve drug-related mortality surveillance.⁴ It should also be noted that the MBN does not include a death in the count until a toxicology report has been completed; therefore, currently pending cases will result in increased numbers in the future.

EMS NALOXONE ADMINISTRATIONS

FINDINGS

- Emergency Medical Services (EMS) data revealed that naloxone was administered 3,150 times during 2025, which is 18.6% higher than the number of administrations in 2024 (2,655).
- There were 107 EMS naloxone administrations per 100,000 persons in Mississippi in 2025.
- On average, 262 naloxone administrations were reported in Mississippi each month during 2025.

Figure 5. Number of Naloxone Administrations by EMS, MS, 2025

CONSIDERATIONS: The life-saving drug naloxone, an opioid antagonist, is used to reverse opioid overdose. The emergence and growing popularity of highly toxic synthetic opioid substances require the following state-level actions:

- Facilitating and expanding access to naloxone for patients with opioid use disorders.
- Providing training on naloxone administration for all first responders and all persons at risk for opioid-related overdoses as well as their families, friends, and community members.

IMPORTANT MESSAGE: Figure 5 documents only naloxone distributed through EMS. Additional distribution occurs through the State Opioid Response (SOR) grant and a standing order. In May 2018, State Health Officer of Mississippi, Dr. Mary Currier, signed a standing order that covers, without a prescription, the dispensing and administration of naloxone. The standing order was re-signed by Dr. Paul Byers, State Epidemiologist, in May of 2019 2020, 2021, 2022 and 2023. The order has been signed again by Dr. Justin Turner for 2024.

SUSPECTED OVERDOSE DEATHS AND NALOXONE ADMINSTRATIONS BY COUNTY

FINDINGS

- > **Suspected Overdose Deaths:** The top 3 counties Lafayette (15), Walthall (34), and Desoto (41) accounted for 46.88% of all suspected overdose deaths in 2025.
- > **Naloxone Administration:** The top 3 counties: Desoto (230), Hinds (274), and Harrison (399), accounted for 28.67% of all 3,150 EMS naloxone administrations in 2025.

Figure 6. Number of Suspected Overdose Deaths by County, MS, 2025

Figure 7. Number of EMS Naloxone Administrations by County, MS, 2025

Data Source: Drug-Related Mortality (Mississippi Bureau of Narcotics)

Data Source: Mississippi Emergency Medical Services (Mississippi State Department of Health)

TREATMENT ADMISSIONS FOR OPIOID DISORDERS

FINDINGS

- Table 2 and Figure 8 report opioid-related admissions to facilities certified by the Department of Mental Health (DMH). The data was collected from clients served by the State Opioid Response (SOR) grant, which provides funding for substance use treatment services at reduced or no cost to *underinsured or uninsured* people.
- A total of 760 Mississippians were admitted in 2025 to community mental health centers for all substance use disorders and 172 (see table 2) for opioid use disorders (includes primary, secondary, and tertiary).
- Opioids were listed as the primary diagnosis for 93 (12.24%) of the 760 unique patients admitted in 2025.
- In Q1, the most patients (142) were admitted for opioid use disorder as a primary diagnosis; however, the most people were admitted for all substance use disorders in Q1 (261)
- Due to the limited population, this data does not comprise a representative sample of the state’s substance use or opioid use prevalence. This population, however, does provide a stringent test of program effectiveness.

Table 2: Unique Patients at Mental Health Facilities with Opioids as Primary, Secondary, or Tertiary Diagnosis, MS, 2025

	Q1 2025	Q2 2025	Q3 2025	Q4 2025	2025 Total
Primary	142	115	127	93	477
Secondary	82	74	72	52	280
Tertiary	37	41	40	27	145
Total	261	230	239	172	902

Figure 8: Total Unique Patients with Opioids as Primary, Secondary, or Tertiary Diagnosis, MS, 2025

CONSIDERATIONS: The actual number of unique patients is a best estimate because patients can be admitted to multiple drug treatment programs, relapse, be re-admitted for a different treatment, or re-admitted in a different region.

TREATMENT ADMISSIONS FOR OPIOID DISORDERS: TYPE OF OPIOID

FINDINGS

- Table 3 and Figure 9 report opioid-related admissions to facilities certified by the Department of Mental Health (DMH). The data was collected from clients served by the State Opioid Response (SOR) grant, which provides funding for substance use treatment services at reduced or no cost to *underinsured or uninsured* people.
- Table 3 and Figure 9 categorize the type of opioid involved in opioid-related admissions (primary, secondary, and tertiary diagnoses) to facilities certified by DMH.
- The “other opioids” category includes prescription opioids and constituted 90.7% of all opioid-related admissions in 2025. Heroin represented 9.3% of admissions.
- Q1 was the peak of opioid admissions (240) while the lowest number of admissions was in Q4 (154).
- Due to the limited population, this data does not comprise a representative sample of the state’s substance use or opioid use prevalence. This population, however, does provide a stringent test of program effectiveness.

Table 3: Number of Unique Opioid Patients by Type of Opioid, MS, 2025					
	Q1 2025	Q2 2025	Q3 2025	Q4 2025	2025 Total
Heroin	21	24	23	15	83
Other Opioids	240	206	214	154	814

CONSIDERATIONS: The actual number of unique patients is a best estimate because patients can be admitted to multiple drug treatment programs, relapse, be re-admitted for a different treatment, or re-admitted in a different region.

NOTE: In July 2020, a transition occurred from the historical reporting system to a SAMHSA-recommended statewide reporting system that produces more accurate data. Therefore, some reported numbers may reflect admission and patient miscounting.

DRUG-RELATED CRIME DATA

FINDINGS

- Drug-Related Arrests:**
- The total number of drug-related arrests reported in 2025 was 22,583, which 12.11% increase from 2024 (20,143).
 - In 2025, an average of 1,881 drug-related arrests were reported each month in Mississippi.
 - There were 765 drug-related arrests per 100,000 persons reported to MBN in 2025.
 - In 2025, the highest numbers of drug-related arrests were reported in DeSoto (3,044), Hinds (1,748), and Harrison (2,559) counties. They accounted for 34.8% of all drug-related arrests in Mississippi.

- Pharmacy Burglaries:**
- In 2025, there were 18 completed pharmacy burglaries which was a decrease from 2024.
 - There was a 45.45% decrease in completed pharmacy burglaries from 2024 to 2025.

Data Source: Drug-Related Crime (Mississippi Bureau of Narcotics)

Figure 11. Number of Drug-Related Arrests by County, MS, 2025

DRUG TAKE BACK

FINDINGS

- The Drug Enforcement Administration (DEA) holds a National Prescription Drug Take-Back Day each year in April and October to collect unused prescription medications. Since its inception, nearly 7,400 tons of drugs have been collected nationwide, with over 41 tons collected in Mississippi alone.
- In October 2025, a total of 571,054 pounds of drugs were collected from 4,317 sites across the United States. During the same event, 4,947 pounds were collected from 51 sites in Mississippi.

Figure 12. National Prescription Drug Take Back Day Results Number of Collection Sites and Weight Collected, United States
October 2020 - October 2025

- The Collection Site Locator on the DEA’s website can be used to find public collection sites between Take Back Days.¹
- Prescription drop boxes are also available year-round at school and law enforcement locations in the following [areas](#) in Mississippi:²

Bay St. Louis PD	Jackson PD Headquarters	Louisville PD	MHP – Meridian	Ocean Springs PD	Vicksburg PD

Opioid	118	38.51
Stimulants	34	11.10
Safety District 8 (pop. = 497,700)	Number of Nonfatal Overdoses	Rate of Nonfatal Overdoses per 100,000 persons
All Drug	1406	282.50
Heroin	12	2.41
Opioid	347	69.72
Stimulants	49	9.85
Safety District 9 (pop. = 166,656)	Number of Nonfatal Overdoses	Rate of Nonfatal Overdoses per 100,000 persons
All Drug	369	221.44
Heroin	0	0.00
Opioid	46	27.61
Stimulants	13	7.80

Announcements and Special Interests

Fentanyl Test Strips

- **Fentanyl Test Strips:** Mississippi's governor, Tate Reeves, signed House Bill 722 to decriminalize possession of Fentanyl test strips beginning July 1, 2023. It is anticipated that this change will help to save lives of Mississippians by giving them a tool to test any drug suspected to contain Fentanyl, which is a powerful synthetic opioid that is responsible for approximately 70,000 overdose deaths annually.
 - Fentanyl is a synthetic opioid that is up to 50 times stronger than heroin and 100 times stronger than morphine. It is a major contributor to fatal and nonfatal overdoses in the U.S.¹
 - There are two types of fentanyl: **pharmaceutical fentanyl** and **illicitly manufactured fentanyl**. Both are considered synthetic opioids. Pharmaceutical fentanyl is prescribed by doctors to treat severe pain, especially after surgery and for advanced-stage cancer.
 - Illicitly manufactured fentanyl (IMF) is available on the drug market in different forms, including liquid and powder.¹
 - Fentanyl and other synthetic opioids are the most common drugs involved in overdose deaths.¹ Even in small doses, it can be deadly. **Over 150 Americans die every day from overdoses related to synthetic opioids like fentanyl.**²

ODFree.org

- <https://odfree.org> is a website created by the Mississippi Public Health Institute in partnership with the Mississippi State Department of Health and content provided through the MOHDC partnership to allow the general public to easily find information regarding:
 - Resources for:
 - Naloxone Information: Includes a link to order a dose of Naloxone to be delivered to your residence.
 - Drug Take Back: Provides the next scheduled DEA Drug Take Back Day with statistics from previous efforts.
 - Request A Town Hall: To discuss the opioid epidemic in the state of Mississippi and have an open forum conversation of how communities can get involved.
 - Pain on the Job: Discusses opioids in the workplace due to job-related injuries and the dangers involved.
 - International Overdose Awareness Day: Brings to light the information for the public to get an overview of just how far-reaching potential overdoses could happen.
 - Professional Resources: Provides links to important resources, such as, Mississippi Behavioral Health Learning Network, Peer Recovery Center of Excellence, National Institute on Drug Abuse Training, U.S. Drug Enforcement Agency Resources, CDC, and SAMHSA.

THE MISSISSIPPI OPIOID AND HEROIN DATA COLLABORATIVE (MS OHDC)**PROJECT DESCRIPTION AND GOALS**

Five state agencies have united to transform one of the most formidable drug-related challenges Mississippi has ever faced into an opportunity for developing data-driven policy changes aimed at combating the current opioid epidemic and preventing future drug-related crises.

GOALS
